

All chapters follow a consistent template including the following features:

- An opening bottom-line/key points section
 - Classification, pathogenesis and prevention of disorder
 - Evidence-based diagnosis, including relevant algorithms, laboratory and imaging tests and potential pitfalls when diagnosing a patient
 - Disease management including commonly used medications with dosages, management algorithms and how to prevent complications
 - How to manage special populations, ie, in pregnancy, children and the elderly
 - The very latest evidence-based results, major society guidelines and key external sources to consult
