

Section 1

- 1.1: Foundations of clinical practice**
- 1.2: Classification and outcome measures**
- 1.3: The musculoskeletal system: structure and function**
- 1.4: Injury and repair**
- 1.5: Haemoglobinopathies**
- 1.6: Prevention of thrombosis in orthopaedic surgery**
- 1.7: Pain and its control**
- 1.8: Biomechanics**
- 1.9: Gait analysis**
- 1.10: Imaging**
- 1.11: Complex regional pain syndrome**
- 1.12: Neuromuscular disorders**
- 1.13: Neuromuscular and skeletal manifestations of neurofibromatosis**

Section 2

- 2.1: Choice of surgery for tumour: Staging and surgical margins**
- 2.2: Amputations, endoprosthetic joint replacement, massive bone replacement, other alternatives**
- 2.3: Benign tumours of soft tissues**
- 2.4: Malignant tumours of soft tissues**
- 2.5: Benign bone tumours**
- 2.6: Malignant bone tumours**
- 2.7: Metastatic bone disease**

Section 3

- 3.1: Cervical spine disorders**
- 3.2: Degenerative disease of the thoracic spine**
- 3.3: Clinical presentations of the lumbar spine**
- 3.4: Non-operative management of non-specific low back pain types 1 and 2**
- 3.5: Cauda equina syndrome**
- 3.6: Surgical management of chronic low back pain**
- 3.7: Management of nerve root pain (syn: sciatica, radicular pain)**
- 3.8: Management of neurogenic claudication and spinal stenosis**
- 3.9: Clinical presentation of spinal deformities**
- 3.10: Idiopathic scoliosis**
- 3.11: Congenital scoliosis and kyphosis**
- 3.12: Neuromuscular scoliosis**
- 3.13: Syndromal scoliosis**
- 3.14: Brace treatment in idiopathic scoliosis: the case for treatment**
- 3.15: Iatrogenic spinal deformity**
- 3.16: Kyphosis**
- 3.17: Spondylolisthesis and spondylolysis**
- 3.18: The infected spine**
- 3.19: Cross-sectional imaging in spinal disorders**

Section 4

- 4.1: The clinical evaluation of the shoulder
- 4.2: Pathology of cuff tears
- 4.3: Treatment of rotator cuff disease
- 4.4: Biceps
- 4.5: Frozen shoulder
- 4.6: Calcifying tendinitis
- 4.7: Instability
- 4.8: Surface replacement of the shoulder
- 4.9: Stemmed total shoulder replacement
- 4.10: Acromioclavicular joint
- 4.11: The clavicle and the sternoclavicular
- 4.12: Disorders of the scapula
- 4.13: Reverse geometry replacement

Section 5

- 5.1: Clinical evaluation of elective problems in the adult elbow
- 5.2: Lateral and medial epicondylitis
- 5.3: Chronic instability of the elbow
- 5.4: Rheumatoid arthritis of the elbow
- 5.5: Osteoarthritis of the elbow joint
- 5.6: Arthroscopy
- 5.7: Bursitis of the elbow

Section 6

- 6.1: Assessment and investigation of chronic wrist pain
- 6.2: Degenerative arthritis of the wrist
- 6.3: Kienböck's disease
- 6.4: The distal radioulnar joint
- 6.5: Rheumatoid arthritis of the hand and wrist
- 6.6: Osteoarthritis of the hand
- 6.7: Dupuytren's disease
- 6.8: Tendon disorders
- 6.9: Reconstruction after nerve injury
- 6.10: Peripheral nerve entrapment
- 6.11: Neurophysiological examination of the hand and wrist
- 6.12: Tumours and hand reconstruction
- 6.13: Ganglia of the wrist and hand
- 6.14: Hand infection

Section 7

- 7.1: Indications for hip replacement
- 7.2: Approaches to the hip
- 7.3: Preoperative planning for total hip replacement, consent, and complications
- 7.4: Total hip replacement: implant fixation
- 7.5: Implant choice for primary total hip arthroplasty
- 7.6: Bearing surfaces

- 7.7: The young arthritic hip
- 7.8: The complex primary total hip replacement
- 7.9: Surgical options excluding total hip replacement for hip pain
- 7.10: Total hip replacement: modes of failure
- 7.11: Revision total hip replacement and complications in total hip replacement
- 7.12: Management of total hip replacement periprosthetic fractures
- 7.13: Management of the infected total hip replacement
- 7.14: Hip resurfacing
- 7.15: Sports injuries in the pelvic region
- 7.16: Inflammatory and metabolic bone disorders of the pelvis
- 7.17: Hip pain in the radiologically normal hip
- 7.18: Hip arthroscopy: assessment, investigation and interventions

Section 8

- 8.1: History and examination of the knee
- 8.2: Cartilage repair in the young knee
- 8.3: Magnetic resonance imaging of the knee
- 8.4: Osteotomies around the knee
- 8.5: Arthrodesis of the knee
- 8.6: Total knee replacement
- 8.7: Complications of total knee replacement
- 8.8: Revision total knee replacement
- 8.9: Miscellaneous conditions around the knee
- 8.10: The patellofemoral joint
- 8.11: Surgical techniques of anterior cruciate ligament reconstruction
- 8.12: Combined ligament injuries around the knee
- 8.13: Unicompartamental knee replacement
- 8.14: Meniscal injury and management

Section 9

- 9.1: Ankle and hindfoot arthritis
- 9.2: Disorders of the forefoot
- 9.3: Diabetic foot
- 9.4: Orthoses of the foot and leg
- 9.5: Tendon and ligament disorders of the foot

Section 10

- 10.1: Metabolic disease of skeleton and inherited disorders
- 10.2: Rheumatoid arthritis
- 10.3: Crystal arthropathies
- 10.4: Spondyloarthropathies
- 10.5: Inflammatory connective tissue disease
- 10.6: Osteoporosis
- 10.7: Osteoarthritis

Section 11

- 11.1: Chronic long bone osteomyelitis
- 11.2: Miscellaneous orthopaedic infections
- 11.3: Amputations and prostheses

11.4: Acute osteomyelitis

11.5: Septic arthritis

Section 12

12.1: Fracture classification

12.2: Complications of fractures

12.3: Orthopaedic approach to the multiply injured patient

12.4: Head, thoracic and abdominal injury in the orthopaedic patient

12.5: Massive transfusion

12.6: Blast and ballistic injury

12.7: Management of open fractures

12.8: Soft tissue coverage

12.9: Combined vascular and orthopaedic injuries

12.10: Limb salvage versus amputation

12.11: Functional bracing

12.12: Principles of plate and screw osteosynthesis

12.13: Intramedullary nailing

12.14: Principles of monolateral external fixation

12.15: Principles of circular external fixation in trauma

12.16: Absorbable implants for fracture fixation

12.17: Stress fractures

12.18: Pathological fractures

12.19: Management of segmental bone defects

12.20: Injuries to muscle-tendon units

12.21: Dislocations and joint injuries in the hand

12.22: Flexor tendon injuries

12.23: Extensor tendon injuries in the hand and wrist

12.24: Soft tissue hand injuries

12.25: Nerve injuries

12.26: Brachial plexus injuries

12.27: Replantation

12.28: Metacarpal and phalangeal fractures

12.29: Scaphoid fractures

12.30: Instabilities of the carpus

12.31: Injuries to the distal radioulnar joint

12.32: Distal radius fracture

12.33: Forearm fractures

12.34: Elbow fractures and dislocations

12.35: Humeral shaft fractures

12.36: Fractures and dislocations of the shoulder girdle

12.37: Imaging in spinal trauma

12.38: Emergency management of the traumatized cervical spine

12.39: Upper cervical injuries

12.40: Subaxial cervical spine injuries

12.41: Whiplash-associated disorders

12.42: Thoracic fractures

12.43: Thoracolumbar, lumbar and sacral fractures

12.44: Post-traumatic spinal reconstruction

- 12.45: Rehabilitation of spinal cord injuries
- 12.46: Pelvic ring fractures: assessment, associated injuries and acute management
- 12.47: Pelvic fracture: definitive management
- 12.48: Fractures of the acetabulum: radiographic assessment and classification
- 12.49: Management of acetabular fractures
- 12.50: Dislocations of the hip and femoral head fractures
- 12.51: Femoral neck fractures
- 12.52: Trochanteric and subtrochanteric fractures
- 12.53: Femur shaft fractures
- 12.54: Supracondylar fractures of the femur
- 12.55: Patella fractures and dislocations
- 12.56: Tibial plateau fractures
- 12.57: Tibial shaft fractures
- 12.58: Tibial plafond fractures
- 12.59: Ankle fractures
- 12.60: Fractures of the talus and peritalar dislocations
- 12.61: Fractures of the calcaneum
- 12.62: Midfoot and forefoot fractures and dislocations

Section 13

- 13.1: Osteomyelitis and septic arthritis in children
- 13.2a: Juvenile idiopathic arthritis: medical aspects
- 13.2b: Juvenile idiopathic arthritis: surgical management
- 13.3: An overview of cerebral palsy
- 13.4: Lower limb management in cerebral palsy
- 13.5: Upper limb management in cerebral palsy
- 13.6: Management of the child with total body involvement
- 13.7: The orthopaedic management of myelomeningocele
- 13.8: Neurological aspects of spinal disorders in children
- 13.9: Arthrogyrosis
- 13.10: Common disorders of the lower limb
- 13.11: Congenital upper limb anomalies
- 13.12: Congenital brachial plexus palsy
- 13.13: Malformations of the hand and wrist
- 13.14: Management of the limb deficient child
- 13.15: The management of limb length inequality
- 13.16: Developmental deformities of the lower limbs
- 13.17: Developmental dysplasia of the hip
- 13.18: Legg-Calve-Perthes disease
- 13.19: Slipped capital femoral epiphysis
- 13.20: Common knee conditions
- 13.21: Congenital talipes equinovarus
- 13.22: The foot in childhood
- 13.23: Sports injuries and syndromes

Section 14

14.1: Musculoskeletal injuries in children

14.2: Physeal injuries

14.3: Fractures of the spine in children

14.4: Injuries around the shoulder in children

14.5: Fractures about the elbow in children

14.6: Fractures and dislocations about the paediatric forearm

14.7: Children's hand trauma

14.8: Injuries of the pelvis and hip in children

14.9: Injuries of the femur and patella in children

14.10: Tibial and ankle fractures in children

14.11: Foot injuries in children
