Part I Anatomical and Electrophysiological Considerations, Clinical Aspects, and Mechanisms of Cardiac Arrhythmias 1

1 Clinical Aspects of Arrhythmias 3

- Definition of Arrhythmia 3
- Classification 3
- Clinical Significance and Symptoms 4
- The Importance of Clinical History and Physical Examination in Diagnosis and Assessment of Arrhythmias 18
- The Importance of Surface ECG and Other Techniques 21
- References 24

2 Anatomic and Electrophysiologic Basis 27

- Anatomic Basis 27
- Electrophysiologic Characteristics 34
- References 51

3 Electrophysiologic Mechanisms 53

- Mechanisms Responsible for Active Cardiac Arrhythmias 53
- Mechanisms Leading to Passive Arrhythmias 70
- References 80

Part II Diagnosis, Prognosis and Treatment of Arrhythmias 83

4 Active Supraventricular Arrhythmias 85

- Premature Supraventricular Complexes 85
- Sinus Tachycardia 88
- Atrial Tachycardia 95
- Junctional Reentrant (Reciprocating) Tachycardia 105
- AV Junctional Tachycardia Due to Ectopic Focus 112
- Chaotic Atrial Tachycardia 115
- Atrial Fibrillation 115
- Atrial Flutter 139
- Supraventricular Tachyarrhythmias and Atrial Wave Morphology: Monomorphic and Polymorphic Morphology 148
- Differential Diagnosis of Supraventricular Tachyarrhythmias with Regular RR Intervals and Narrow QRS 149
- Electrocardiographic Diagnosis of the Paroxysmal Supraventricular Tachycardias: a Sequential Approach 151
- References 155

5 Active Ventricular Arrhythmias 165

- Premature Ventricular Complexes 165

- Ventricular Tachycardias 174
- Ventricular Flutter 200
- Ventricular Fibrillation 201
- References 205

6 Passive Arrhythmias 209

- Escape Complex and Escape Rhythm 209
- Sinus Bradycardia due to Sinus Automaticity Depression 209
- Sinoatrial Block 212
- Atrial Blocks 214
- Atrioventricular Block 216
- Ventricular Blocks 218
- Cardiac Arrest 226
- The Pacemaker Electrocardiography 226
- Clinical, Prognostic, and Therapeutic Implications of Passive Arrhythmias 234
- References 240

7 Analytical Study of an Arrhythmia 245

- Determining the Presence of a Dominant Rhythm 245
- Atrial Wave Analysis 245
- QRS Complex Analysis 246
- Atrioventricular Relationship Analysis 248
- Premature Complex Analysis 249
- Pause Analysis 249
- Delayed Complex Analysis 249
- Analysis of the P Wave and QRS JT Complexes of Variable Morphology 249
- Repetitive Arrhythmias Analysis: Bigeminal Rhythm 250
- Differential Diagnosis Between Several Arrhythmias in Special Situations 252
- References 255

Part III The ECG and Risk of Arrhythmias and Sudden Death in Different Heart Diseases and Situations 257

8 Ventricular Pre-Excitation 259

- Concept and Types of Pre-Excitation 259
- WPW-type Pre-Excitation (Type 1) 259
- Atypical Pre-Excitation 268
- Short PR Interval Pre-Excitation 268
- References 270

9 Inherited Heart Diseases 273

- Introduction 273
- Cardiomyopathies 273
- Specific Conduction System Involvement: Lenegre Syndrome 285
- Ionic Channel Disorders in the Absence of Apparent Structural Heart Disease: Channelopathies 285

- References 305

10 Other ECG Patterns of Risk 313

- Severe Sinus Bradycardia 313
- Third-Degree (Advanced) Interatrial Block 313
- High-Risk Ventricular Block 317
- Advanced Atrioventricular Block 319
- The Presence of Ventricular Arrhythmias in Chronic Heart Disease Patients 321
- Acquired Long QT 322
- Electrical Alternans 325
- Other Electrocardiographic Patterns of Risk for Sudden Death 326
- Early Repolarization (ER) Pattern (J Wave) and Sudden Death 326
- Risk of Serious Arrhythmias and Sudden Death in Patients with Normal or Nearly Normal ECG 329
- References 331

11 Arrhythmias in Different Heart Diseases and Situations 335

- Ischemic Heart Disease 335
- Heart Failure 341
- Valvular Heart Disease 345
- Congenital Heart Disease 346
- Hypertensive Heart Disease 348
- Myocarditis 348
- Cor Pulmonale 348
- Pericardial Disease 348
- Sudden Death in Other Heart Diseases 349
- Sudden Infant Death Syndrome 349
- Athletes 349
- Alcohol Intake 351
- Special Situations 351
- Sudden Death in Apparently Healthy People 354
- References 354
- Appendix 359
- Introduction 359
- Calculation of Sensitivity, Specificity, and Predictive Value 359
- Diagnostic Techniques 361
- Therapeutic Techniques 372
- Antiarrhythmic Agents 384
- Classification of the Recommendations for Diagnostic and Therapeutic Procedures and Level of Evidence (AHA/ESC/ACC Guidelines) 388
- References 389
