

## Chapter 1: Drug Delivery, Monitoring and Interactions

Bioavailability of a Drug

Drug Administration Routes

Drug Interactions

Drug Errors

Pharmacogenomics

Neuropharmacology and Critical Care Pharmacology

## Chapter 2: Analgesia and Neuromuscular Blockers

Deciding on Sedation

Sedative Drugs

Analgesics

Neuromuscular Blockers

Neuromuscular Blockers in ICU Practice

Neuromuscular Blockers Reversal

## Chapter 3: Agitation and Delirium

Causes of delirium

Clinical Features of Delirium

Pharmacologic Treatment of Agitation

Neuroleptics

Benzodiazepines

Preventive Drugs

## Chapter 4: Pain Management

Grading Pain

Types of Pain in the Neurosciences ICU

Indications for Pain Management

Drugs for pain

Non-steroidal Anti-Inflammatory Agents

Patient-controlled Analgesia

## Chapter 5: Osmotic Therapy

The Constants of Brain Volume

Hyperosmolar Fluids

Osmotic Agents in Clinical Practice

## Chapter 6: Antiepileptic drugs

Seizures in the ICU

Treatment Protocols

Antiepileptic Drugs Used in ICU Practice

Interactions and Adjustments

## Chapter 7: Anticoagulation and Reversal Drugs

Anticoagulation and Stroke

Heparin and Warfarin

Factor Xa Inhibitors

Thrombin Inhibitors

Hemorrhage from Anticoagulants

Current Recommendations on Reversal Agents

Chapter 8: Antifibrinolytics and Thrombolytics  
Basic Mechanisms and Targets  
Antifibrinolytics  
Fibrinolytics  
Thrombolytics  
Post-alteplase Care  
Chapter 9: Antiplatelet Agents  
Clinical Trials on Antiplatelet Agents in Stroke  
Current Indications for Antiplatelet Agents  
Antiplatelet Agents  
Testing Platelet Function  
Antiplatelet Resistance  
Discontinuation Antiplatelet Agents before Procedure  
Clinical Urgency While on Antiplatelets  
Chapter 10: Immunosuppression and Immunotherapy  
Corticosteroids  
Plasma Exchange  
Intravenous Immunoglobulin  
Check Point Inhibitor Immunotherapy  
Other Therapeutic Targets in Autoimmune Neurology  
Chapter 11: Antimicrobial Therapy for CNS infections  
Bacterial Meningitis  
Viral, Fungal, and Parasitic Infections  
The Pharmacology of Antibiotics  
Antivirals  
Antifungals  
Chapter 12: Vasopressors and Inotropes  
Mechanisms of Action in Vasopressors and Inotropes  
Vasopressors  
Inotropes  
Use in Clinical Practice  
Chapter 13: Antihypertensives and Antiarrhythmics  
Definition of Hypertension and Blood Pressure Goals  
Best Practice of Antihypertensives  
Control of Blood Pressure after Urgent Control  
Antiarrhythmic Drugs  
Chapter 14: Fluid Therapy  
Regulation of Fluid Status  
General Principles of Fluid Management  
Type of Fluids  
Fluid Administration  
Fluid Management Principles in the NICU  
Acute Fluid Resuscitation  
Chapter 15: Drugs to Correct Electrolyte and Acid Base Disorders

Common Electrolyte Replacements  
Disorders of Sodium and Water homeostasis  
Drugs to manage Sodium Disorders  
Chapter 16: Antidotes with Overdose  
First Treatment Considerations  
Toxins and Major Laboratory Abnormalities  
Neurology of Overdose  
Commonly Used Agents for Detoxification  
Major Toxidromes  
Toxic Dysautonomias  
Chapter 17: Drugs for Prevention of Complications  
Prevention of Deep Venous Thrombosis  
Prevention of Hyperglycemia  
Prevention of Stress Ulcers  
Prevention of Infections  
Prevention of Cerebral vasospasm  
Chapter 18: Withdrawal Syndromes and Treatment  
Alcohol Withdrawal Syndrome  
Opioid Withdrawal  
Stimulant Withdrawal  
Baclofen Withdrawal  
Nicotine Withdrawal  
Chapter 19: Treatment of Brain Injury-associated Symptoms and Signs  
Control of Specific Headaches  
Control of Nausea and Vomiting  
Control of Hiccups  
Control of Secretions  
Control of Constipation and Dysmotility  
Control of Fever and Shivering  
Control of Rhabdomyolysis  
Chapter 20: Drugs used in Neurorehabilitation  
Neurostimulants  
Drugs for post- stroke depression  
Drugs for spasticity  
Index
