

# CONTENTS

- 1 Physiology of Body Fluids, 1**
  - Objectives, 1
  - Key Terms, 1
  - Concept of Steady-State Balance, 1
  - Physicochemical Properties of Electrolyte Solutions, 2
    - Molarity and Equivalence, 2*
    - Osmosis and Osmotic Pressure, 3*
    - Osmolarity and Osmolality, 3*
    - Tonicity, 4*
    - Oncotic Pressure, 5*
    - Specific Gravity, 5*
  - Volumes of Body Fluid Compartments, 6
  - Composition of Body Fluid Compartments, 6
  - Fluid Exchange Between Body Fluid Compartments, 7
    - Capillary Fluid Exchange, 8*
    - Cellular Fluid Exchange, 9*
  - Summary, 11
  - Self-Study Problems, 12
- 2 Structure and Function of the Kidneys, 14**
  - Objectives, 14
  - Key Terms, 14
  - Structure of the Kidneys, 15
    - Gross Anatomy, 15*
    - Ultrastructure of the Nephron, 15*
    - Ultrastructure of the Glomerulus, 19*
    - Ultrastructure of the Juxtaglomerular Apparatus, 23*
    - Innervation of the Kidneys, 24*
  - Summary, 24
  - Self-Study Problems, 24
- 3 Glomerular Filtration and Renal Blood Flow, 25**
  - Objectives, 25
  - Key Terms, 25
  - Renal Clearance, 25
  - Glomerular Filtration Rate, 27
    - Glomerular Filtration, 28*
    - Determinants of Ultrafiltrate Composition, 29*
    - Dynamics of Ultrafiltration, 29*
  - Renal Blood Flow, 31
  - Regulation of Renal Blood Flow and Glomerular Filtration Rate, 35
    - Sympathetic Nerves, 35*
    - Angiotensin II, 36*
    - Prostaglandins, 37*
    - Nitric Oxide, 38*
    - Endothelin, 38*
    - Bradykinin, 38*
    - Adenosine, 38*
    - Natriuretic Peptides, 38*
    - Adenosine Triphosphate, 38*
    - Glucocorticoids, 38*
    - Histamine, 38*
    - Dopamine, 38*
  - Summary, 39
  - Self-Study Problems, 40
- 4 Renal Transport Mechanisms: NaCl and Water Reabsorption Along the Nephron, 41**
  - Objectives, 41
  - Key Terms, 41
  - General Principles of Membrane Transport, 42
  - General Principles of Transepithelial Solute and Water Transport, 44
  - NaCl, Solute, and Water Reabsorption Along the Nephron, 47
    - Proximal Tubule, 47*
    - Henle's Loop, 55*
    - Distal Tubule and Collecting Duct, 57*
  - Regulation of NaCl and Water Reabsorption, 59
  - Summary, 64
  - Self-Study Problems, 65
- 5 Regulation of Body Fluid Osmolality: Regulation of Water Balance, 66**
  - Objectives, 66
  - Key Terms, 66
  - Arginine Vasopressin, 68
    - Osmotic Control of Arginine Vasopressin Secretion, 70*
    - Hemodynamic Control of Arginine Vasopressin Secretion, 70*
    - Arginine Vasopressin Actions on the Kidneys, 71*
  - Thirst, 74

- Renal Mechanisms for Dilution and Concentration of the Urine, 75
  - Medullary Interstitium*, 79
  - Vasa Recta Function*, 81
- Assessment of Renal Diluting and Concentrating Ability, 81
- Summary, 82
- Self-Study Problems, 83
- 6 Regulation of Extracellular Fluid Volume and NaCl Balance**, 84
  - Objectives, 84
  - Key Terms, 84
  - Whole-Body Na<sup>+</sup> Balance, 85
  - Concept of Effective Circulating Volume, 87
  - Volume-Sensing Systems, 88
    - Volume Sensors in the Low-Pressure Cardiopulmonary Circuit*, 88
    - Volume Sensors in the High-Pressure Arterial Circuit*, 89
    - Volume Sensor Signals*, 89
    - Renal Sympathetic Nerves*, 89
    - Renin-Angiotensin-Aldosterone System*, 90
    - Natriuretic Peptides*, 93
    - Arginine Vasopressin*, 93
  - Control of Renal NaCl Excretion During Euvolemia, 93
    - Mechanisms for Maintaining Constant Na<sup>+</sup> Delivery to the Distal Tubule in Euvolemia*, 94
    - Regulation of Distal Tubule and Collecting Duct Na<sup>+</sup> Reabsorption in Euvolemia*, 94
  - Control of Na<sup>+</sup> Excretion With Volume Expansion, 95
  - Control of Na<sup>+</sup> Excretion With Volume Contraction, 96
  - Edema, 98
    - Alterations in Starling Forces*, 98
    - Capillary Hydrostatic Pressure (P<sub>c</sub>)*, 98
    - Plasma Oncotic Pressure (π)*, 98
    - Capillary Permeability*, 99
    - Lymphatic Obstruction*, 99
    - Role of the Kidneys*, 100
  - Summary, 100
  - Self-Study Problems, 101
- 7 Regulation of Potassium Balance**, 103
  - Objectives, 103
  - Key Terms, 103
  - Overview of K<sup>+</sup> Homeostasis, 103
  - Regulation of Plasma [K<sup>+</sup>], 105
    - Epinephrine*, 106
    - Insulin*, 106
    - Aldosterone*, 106
  - Alterations of Plasma [K<sup>+</sup>], 107
    - Acid-Base Balance*, 107
    - Plasma Osmolality*, 107
    - Cell Lysis*, 107
    - Exercise*, 107
  - K<sup>+</sup> Excretion by the Kidneys, 108
  - Cellular Mechanisms of K<sup>+</sup> Transport by Principal Cells and Intercalated Cells in the Distal Tubule and Collecting Duct, 109
  - Regulation of K<sup>+</sup> Secretion by the Aldosterone-Sensitive Distal Nephron, 109
    - Plasma [K<sup>+</sup>]*, 110
    - Aldosterone*, 111
    - Arginine Vasopressin*, 113
  - Factors That Perturb K<sup>+</sup> Excretion, 114
    - Flow of Tubular Fluid*, 114
    - Acid-Base Balance*, 114
    - Glucocorticoids*, 116
  - Summary, 118
  - Self-Study Problems, 118
- 8 Regulation of Acid-Base Balance**, 119
  - Objectives, 119
  - Key Terms, 119
  - HCO<sub>3</sub><sup>-</sup> Buffer System, 120
  - Overview of Acid-Base Balance, 120
  - Renal Net Acid Excretion, 122
  - HCO<sub>3</sub><sup>-</sup> Reabsorption Along the Nephron, 122
  - Regulation of H<sup>+</sup> Secretion, 124
  - Formation of New HCO<sub>3</sub><sup>-</sup>, 127
  - Response to Acid-Base Disorders, 131
    - Extracellular and Intracellular Buffers*, 131
    - Respiratory Compensation*, 131
    - Renal Compensation*, 133
  - Simple Acid-Base Disorders, 133
    - Metabolic Acidosis*, 133
    - Metabolic Alkalosis*, 133
    - Respiratory Acidosis*, 134
    - Respiratory Alkalosis*, 134
  - Analysis of Acid-Base Disorders, 135
  - Summary, 136
  - Self-Study Problems, 137

- 9 Regulation of Calcium and Phosphate Homeostasis, 138**  
Objectives, 138  
Key Terms, 138  
Calcium, 139  
    *Overview of Ca<sup>++</sup> Homeostasis, 140*  
    *Ca<sup>++</sup> Transport Along the Nephron, 142*  
    *Regulation of Urinary Ca<sup>++</sup> Excretion, 143*  
    *Calcium-Sensing Receptor, 144*  
Phosphate, 145  
    *Overview of P<sub>i</sub> Homeostasis, 145*  
    *P<sub>i</sub> Transport Along the Nephron, 146*  
    *Regulation of Urinary P<sub>i</sub> Excretion, 147*  
Integrative Review of Parathyroid Hormone and Calcitriol on Ca<sup>++</sup> and P<sub>i</sub> Homeostasis, 148  
Summary, 150  
Self-Study Problems, 150
- 10 Physiology of Diuretic Action, 151**  
Objectives, 151  
Key Terms, 151  
General Principles of Diuretic Action, 151  
    *Sites of Action of Diuretics, 152*  
    *Response of Other Nephron Segments, 152*  
    *Adequate Delivery of Diuretics to Their Site of Action, 152*  
    *Volume of the Extracellular Fluid, 152*  
    Diuretic Braking Phenomenon, 153  
    Mechanisms of Action of Diuretics, 154  
        *Osmotic Diuretics, 154*  
        *Carbonic Anhydrase Inhibitors, 155*  
        *Loop Diuretics, 155*  
        *Thiazide Diuretics, 156*  
        *K<sup>+</sup>-Sparing Diuretics, 156*  
        *Aquaretics, 156*  
    Effect of Diuretics on the Excretion of Water and Other Solutes, 157  
        *Solute-Free Water, 157*  
        *K<sup>+</sup> Excretion, 157*  
        *HCO<sub>3</sub><sup>-</sup> Excretion, 157*  
        *Ca<sup>++</sup> and P<sub>i</sub> Excretion, 158*  
    Summary, 159  
    Self-Study Problems, 160
- Additional Reading, 161  
Appendix A: Integrative Case Studies, 162  
Appendix B: Normal Laboratory Values, 165  
Appendix C: Nephron Function, 166  
Appendix D: Answers to Self-Study Problems, 170  
Appendix E: Answers to Integrative Case Studies, 181  
Appendix F: Review Examination, 186  
Appendix G: Answers to Review Examination, 197  
Index, 199
