Preface.....	xxi
Acknowledgments.....	xxv
Authors.....	xxvii

Chapter 1 Chronic Hyperglycemia—A Primer	1
1.1 Chronic Hyperglycemia versus Type 2 Diabetes Mellitus	1
1.2 Time May Not Be on Your Side	1
1.3 Chronic Hyperglycemia Seriously Harms the Body	3
1.4 The More Sugar in Your Blood, the Shorter Your Life.....	4
1.4.1 The Lesson	5
1.4.2 Survivor Bias.....	5
1.5 The Sugar in Blood: Blood Glucose	6
1.6 Diurnal Cycle of Blood Glucose.....	6
1.6.1 Caveat.....	7
1.7 Metabolism: Fueling the Machinery of Life	7
1.8 The Pancreas Produces the Hormone Insulin	8
1.9 The Liver	8
1.10 Diabetic Ketoacidosis	9
1.11 Insulin.....	10
1.11.1 Incretins.....	10
1.12 The Islet of Langerhans	11
1.12.1 β -Cells Secrete Insulin	11
1.12.2 Diabetes and β -Cell Dysfunction	11
1.12.3 Diabetes and Mitochondrial β -Cell Dysfunction— Mitochondrial Diabetes.....	12
1.12.4 α -Cells Secrete Glucagon.....	12
1.12.5 δ -Cells Secrete Somatostatin	12
1.13 Insulin and Glucagon: The Yin and Yang of It	12
1.13.1 The Disposition Index	13
1.14 Diabetes: “The Wasting and Thirst Disease” (消渴).....	14
1.15 Symptoms of Diabetes.....	15
1.16 Effect of Meals on Pancreatic Hormone Release	15
1.17 The Role of Insulin in Muscle	16
1.18 Blood Glucose after Exercise	16
1.19 Diabetes and BMI.....	16
References	17

Chapter 2 Hyperglycemia Impairs Blood Vessel Function.....	21
2.1 On a Limb.....	21
2.1.1 NO from L-Arginine.....	21
2.2 The Focus on Arterial Blood Vessels.....	22
2.2.1 Diabetes and Blood Vessels of the Blood Vessels: Vasa Vasorum	23
2.3 Addiction to Sugar Is More Damaging in Aging	25
2.4 Metabolic Memory	27
2.5 Diabetes and Endothelium (Dys)function	28

2.5.1	The Endothelium.....	28
2.5.2	Oxidative Stress.....	30
2.5.3	Should Minimal Blood Glucose Variability Become the Gold Standard of Glycemic Control?.....	31
2.5.4	Statins Improve Endothelium Function Independent of Lowering Cholesterol.....	32
2.5.5	Glucagon-Like Peptide-1.....	32
2.5.6	Endothelial Dysfunction via Stressed Endoplasmic Reticulum.....	32
2.5.7	Diabetes Impairs Endothelium Self-Repair.....	33
2.6	Antidiabetic Treatment (Metformin) Improves Endothelial Wound Healing.....	33
2.7	Diabetes and Mitochondria Dysfunction.....	34
2.7.1	“Obesity and Inactivity” Theory of Mitochondrial Dysfunction in Diabetes.....	34
2.7.2	An Aging Mitochondrion Is a Fat Mitochondrion.....	35
2.8	What Kind of “Vessels” Are Blood Vessels?.....	35
2.9	Arterial Pulse Wave Analysis in Diabetes.....	36
2.9.1	Arterial PWV Analysis Improves Observation of Vasodilation.....	38
2.9.1.1	Quantification and Norms Values of the Arterial PWV.....	38
2.9.2	Characteristics of the Pulse Waveform and PWV in Diabetes.....	40
2.9.2.1	The Augmentation Index.....	40
2.9.3	Diabetes and NO Regulation of Blood Vessels.....	41
2.9.4	Clinical Correlates of Arterial Pulse Waveform and Velocity in Type 2 Diabetes.....	43
2.9.4.1	Windkessel and Diabetes.....	44
2.9.5	Diabetes and the Risk of Stroke.....	45
2.9.6	Advanced Glycation End Products and Blood Vessel Stiffness in Diabetes.....	46
2.9.6.1	Arterial Pulse Waveform, AIx, and Diabetes.....	46
2.9.7	Mechanisms of Arterial Dysfunction in Diabetes Involve Glucose and Insulin.....	47
2.10	Assessing Endothelial Dysfunction in Diabetes by Reactive Hyperemia.....	48
	References.....	48
Chapter 3	Cardiovascular and Related Complications of Diabetes.....	55
3.1	Introduction.....	55
3.2	Hyperglycemia and Hypertension.....	55
3.2.1	Hyperglycemia, Hypertension, and Insulin Deficiency.....	58
3.2.1.1	Implication of the Recommended Treatment Guidelines for Chronic Hyperglycemia with Hypertension.....	58
3.2.2	Hyperglycemia, Hypertension, and Endothelial Dysfunction.....	58
3.2.3	Endothelium Dysfunction as the “Link” Between Hyperglycemia and Hypertension.....	59
3.3	Chronic Hyperglycemia and Atherosclerosis.....	59
3.3.1	Hyperglycemia, Vasa Vasorum, and Atherosclerosis.....	59
3.3.2	Interprandial and Postprandial Glucose Swings Promote Atherosclerosis.....	61
3.3.3	Hyperglycemia and Endoplasmic Reticulum Stress.....	61
3.3.4	Advanced Glycation End Product Receptor.....	61
3.3.5	Alternate Hypothesis.....	62
3.4	Hyperglycemia, Cardiovascular Disease, and Heart Disease.....	62

3.4.1	Some Anatomical and Pathophysiological Changes in the Heart Related to Chronic Hyperglycemia.....	63
3.4.1.1	The Effect of Hyperglycemia on Heart Rate Variability....	65
3.4.1.2	HRV and Blood Glucose Levels: Potential for Noninvasive Glucose Monitoring for Diabetes	66
3.5	Diabetes and Thyroid Hormones.....	67
3.5.1	Hypothyroidism Raises the Risk of Diabetes	67
3.6	Diabetes, Kidney Function, and Kidney Stone Formation.....	70
3.6.1	Type 2 Diabetes is Linked to Kidney Disease	70
3.6.1.1	A Note on eGFR.....	71
3.6.1.2	GFR and Creatinine Normally Rise with Age	72
3.6.2	Diabetes and Kidney Stones.....	74
3.7	Diabetes-Related Impaired Wound Healing	76
3.7.1	Venous Ulcers.....	77
3.7.2	The Role of Endothelium in Wound Healing.....	77
3.8	Diabetes Impairs Sexual Function Both in Men and in Women by Jeopardizing Endothelium Health	78
3.8.1	Diabetes Impairs Sexual Function in Women.....	79
3.8.1.1	Is Sexual Dysfunction More Prevalent in Type 1 or Type 2 Diabetes?	82
3.8.2	Diabetes Impairs Sexual Function in Men.....	83
3.8.2.1	The ACh/NO/cGMP Pathway.....	84
3.8.2.2	NO from L-Arginine	84
3.8.2.3	The Role of Citrulline in NO Formation	84
3.8.3	The Pathway to Penile Erection	84
3.8.3.1	“The Canary in the Coal Mine”	85
3.8.4	How Does Diabetes Lead to Erectile Dysfunction?.....	86
3.9	A Note on Obstructive Sleep Apnea and Heart Arrhythmias in Type 2 Diabetes... 88	
	References	90
Chapter 4	Hyperglycemia Impairs the Functions of Blood	97
4.1	Blood—Some Basics	97
4.2	Hyperglycemia and Blood Viscosity	98
4.3	Hyperglycemia Impedes Blood Flow by Increasing Viscosity	100
4.3.1	Hyperglycemia Impedes Coronary Blood Flow	100
4.3.2	Elevated WBC Count in Type 2 Diabetes—Chronic Inflammation	101
4.3.3	Hyperglycemia Can Cause Red Cell Membrane Lipid Peroxidation and Fragility.....	101
4.3.4	Increased Red Cell Aggregation in Diabetes Raises Cardiovascular Risk Factors.....	101
4.3.4.1	Glycemic Control Reduces Red Cell Aggregation	102
4.3.5	Hyperglycemia Alters Fibrin Clotting Properties.....	102
4.3.6	Type 2 Diabetes May Feature Low Hemoglobin Concentration and Anemia	103
4.3.6.1	Hypothesis: Hypoxemia Promotes β -Cell Failure in Type 2 Diabetes Mellitus.....	104
4.3.7	Hemoglobin Glycation and Oxihemoglobin Dissociation.....	104
4.3.7.1	Elevated HbA1c Can Lead to False Pulse-Oximetry Readings	105
4.3.8	The Effect of Hyperglycemia on Blood Platelets.....	106

	4.3.8.1	Insulin Resistance, Insulin Deficiency, and Platelet Function	107
	4.3.8.2	Diabetes, Inflammation, and Platelet Function	108
4.4		Hyperglycemia Impedes Red Cell Form and Function.....	108
	4.4.1	As Hyperglycemia Impairs Red Cell Form and Function, It Impairs Longevity.....	111
	4.4.1.1	Blood Cell Telomeres Mirror Incipient and Developing Diabetes.....	111
4.5		Chronic Hyperglycemia and Management of RBC Iron.....	114
		References	115
Chapter 5		Chronic Hyperglycemia Impairs Vision, Hearing, and Sensory Function	121
	5.1	Diabetes Causes Retinal Vascular Dysfunction, Retinal Detachment, Age-Related Macular Degeneration, and Cataract Formation.....	121
	5.1.1	The Retina	122
	5.1.2	Hyperglycemia Damages Retinal Blood Vessel Endothelial Cell Mitochondria	123
	5.1.3	Diabetic Retinopathy, Hypoxia, and Oxidative Stress	123
	5.1.4	Vascular Lesions in Diabetic Retinopathy	124
	5.1.5	Hyperglycemia and Retinal Detachment	124
	5.1.6	Hyperglycemia and Macular Pucker (Epiretinal Membrane).....	125
	5.1.7	Hyperglycemia and the Cornea.....	126
	5.1.7.1	Corneal Neuropathy.....	127
	5.1.7.2	Mechanisms of Corneal Neuropathy	127
	5.1.7.3	Corneal Hysteresis.....	128
	5.1.7.4	Corneal Endothelial Disease	128
	5.1.8	Hyperglycemia and Glaucoma	130
	5.1.9	Hyperglycemia and Cataracts	131
	5.1.9.1	Cataracts, Blood Glucose, and the Polyol Pathway: The Osmotic Hypothesis	132
	5.1.10	Hyperglycemia and Age-Related Macular Degeneration	133
	5.2	Chronic Hyperglycemia Impairs Hearing.....	135
	5.2.1	ABR Wave V Latencies.....	137
	5.2.2	Hyperglycemia and Tinnitus	138
	5.3	Diabetic Neuropathy.....	139
	5.3.1	Diabetic Peripheral Neuropathy	141
	5.3.2	Paradoxical Treatment-Induced Neuropathy in Diabetes—“Insulin Neuritis”	142
	5.3.3	Pathogenesis of Diabetic Polyneuropathy	142
		References	143
Chapter 6		On the Importance of Monitoring Blood Sugar and Other “Vital Signs”	149
	6.1	The Importance of Regular and Comprehensive Testing.....	149
	6.2	Self-Monitoring of Blood Glucose	149
	6.2.1	Choosing a Glucometer	150
	6.2.2	Blood Glucose Target Criteria.....	151
	6.2.2.1	HbA1c	151
	6.2.3	HbA1c Test Units.....	153
	6.2.4	How Often to Test?.....	154

6.2.5	Fasting Readings, the Dawn Phenomenon	154
6.2.6	The Somogyi Effect	154
6.2.7	Checking After Meals	154
6.3	Arterial Blood Pressure and Chronic Hyperglycemia	155
6.3.1	Self-Monitoring Blood Pressure.....	156
6.3.1.1	On Using a Home Blood Pressure Monitor	156
6.3.1.2	“Know Your Numbers”	156
6.3.2	Peripheral and Microvasculature Arterial Blood Vessel Disease—The Ankle–Brachial (Blood Pressure) Index	156
6.3.2.1	The ABI Self-Test	157
6.3.2.2	The ABI in Diabetes	159
6.3.2.3	The ABI and Microalbuminuria.....	160
6.3.2.4	ABI Alerts to Postprandial Elevated Lipids	160
6.4	Chronic Hyperglycemia and Lipid Profile	161
6.4.1	Cholesterol Self-Testing.....	163
6.5	Thyroid Dysfunction and Type 2 Diabetes.....	163
6.5.1	How Thyroid Dysfunction May Affect Persons with Chronic Hyperglycemia	163
6.5.2	The Barnes Test—A Simple Self-Test for Low Thyroid Function ...	165
6.5.2.1	Factors That Can Affect Body Core Temperature.....	166
6.6	Diabetes and Kidney Stones.....	167
6.6.1	Urine pH and Nephrolithiasis in Type 2 Diabetes	168
6.6.2	Measuring Urine pH.....	169
6.7	Testing NO Availability to Support Healthy Endothelium Function	170
6.7.1	NOx Self-Test	170
	References	173
Chapter 7	Advanced Glycation End Products—A Special Hazard in Diabetes.....	179
7.1	What Are Advanced Glycation End Products—“AGEs”?	179
7.1.1	Are AGEs, the “Missing Link”?	180
7.2	AGEs in Commonly Consumed Foods	181
7.2.1	Levels in Some Common Foods	182
7.2.1.1	AGE Lowering Factor.....	183
7.2.1.2	Some Guidelines.....	199
7.2.1.3	How Much AGE-ing Do We Actually Do?	200
7.2.1.4	A Diet Low in dAGEs Can Improve Insulin Sensitivity ...	200
7.3	Weight Loss Diet Caution.....	203
7.4	AGEs Impair Endothelium Function.....	203
7.4.1	AGEs Impair the Formation of eNOS, the Key to NO Formation...	204
7.4.2	AGEs Also Target Kidneys	204
7.5	Tips for Reducing AGEs.....	205
7.6	Ethnic and Other Folklore-Based Nutraceuticals as Anti-AGE Strategies ...	205
7.6.1	Australian <i>Petalostigma banksii</i> and <i>Petalostigma pubescens</i>	206
7.6.2	<i>Yucatan Cassia fistula</i> , <i>Piper auritum</i> , <i>Ehretia tinifolia</i> , <i>Manilkara zapota</i> , and <i>Ocimum campechianum</i>	206
7.6.3	<i>Sida cordifolia</i> , <i>Plumbago zeylanica</i> , <i>Tribulus terrestris</i> , <i>Glycyrrhiza glabra</i> , and <i>Rosa indica</i>	206
7.6.4	Aged Garlic	207
7.6.5	Tomato Paste Is Anti AGE-ing.....	207
7.6.6	Holly Extract Inhibits AGE Formation	207

7.6.7	From Indonesia and Malaysia: <i>Clitoria ternatea</i>	207
7.6.8	GSH Supplements.....	208
7.7	A Note on Glucosepane and Type 2 Diabetes	208
	References	209
Chapter 8	General Nutritional Considerations for Chronic Hyperglycemia— Type 2 Diabetes	213
8.1	How to Avoid AGE-ing	213
8.2	The Mediterranean Diet Plan	215
8.3	The Mediterranean Diet Plan as Integrative Intervention in Type 2 Diabetes.....	217
8.3.1	The Mediterranean Diet Is a Rich Source of NO Donor Nitrates....	219
8.3.1.1	The Enterosalivary Circulation Cycle	219
8.4	Is Toasting with Wine Really “To Your Health”?	220
8.5	Activating Sirtuin 1 Improves Glycemia in Type 2 Diabetes.....	221
8.6	Mediterranean Diet and Obesity	223
8.7	Mediterranean Diet and the Metabolic Syndrome	225
8.8	Mediterranean Diet and Elevated Serum Lipids	226
8.9	Mediterranean Diet and Hypertension	226
8.10	Averting Premature Aging of the Endothelium	227
8.10.1	Mediterranean Diet, Endothelial Function, and Type 2 Diabetes....	227
8.10.2	Mediterranean Diet, Incretin, and Type 2 Diabetes.....	228
	References	230
Chapter 9	Mode of Action of Selected Botanicals That Lower Blood Glucose	235
9.1	Antidiabetic Agents from Medicinal Plants	235
9.2	Evidence-Based Integrative (Adjunctive) Approaches to Blood Glucose Control	235
9.3	Botanicals That Lower Blood Glucose.....	236
9.4	Selected Medicinal Herbs and Compounds Beneficial in Type 2 Diabetes	238
9.5	Herbs and Compounds That Regulate Insulin Resistance	238
9.5.1	Amorfrutins and Licorice	238
9.5.2	<i>Dioscorea</i> Polysaccharides and <i>Dioscorea</i>	239
9.5.3	Anthocyanins and Blueberry.....	239
9.5.4	<i>Astragalus</i> Polysaccharides and <i>Astragalus</i>	240
9.5.5	Cinnamon	240
9.5.6	Fenugreek	240
9.5.7	Lychee	241
9.6	Herbs and Compounds That Regulate Cell Function.....	241
9.6.1	Papaya (<i>Carica papaya</i>) and Pandan (<i>Pandanus amaryllifolius</i>)	241
9.6.2	Conophylline and <i>Tabernaemontana divaricata</i>	242
9.6.3	Kinsenoside	242
9.6.4	Nymphayol	242
9.6.5	Silymarin (Milk Thistle)	242
9.6.6	Polynes and <i>Bidens pilosa</i>	243
9.6.7	<i>Gymnema sylvestre</i>	244
9.7	Herbs and Compounds That Regulate Glucagon-Like Peptide-1 Homeostasis.....	244

9.7.1	Fructans	244
9.7.2	Monounsaturated Fatty Acid.....	245
9.8	Herbs and Compounds That Regulate Glucose Absorption in the Gut.....	245
9.8.1	Serotonin Derivatives and Safflower.....	245
9.8.2	<i>Laminaria japonica</i> and <i>Ishige okamurae</i> —Japanese Kelp Seaweed.....	246
9.9	Herbs and Compounds with Multiple Antidiabetic Actions	246
9.9.1	Berberine.....	246
9.9.2	Bitter Melon.....	247
9.9.3	Capsaicin and Chili Pepper.....	247
9.9.4	Ginseng.....	247
9.9.5	Turmeric (<i>Curcuma longa</i>).....	249
9.9.6	Dicaffeoylquinic Acids, Matesaponins, and Yerba Mate Tea.....	251
9.9.7	Ginger (<i>Zingiber officinale</i>) and Gingerol	251
9.9.8	Epigallocatechin-3-Gallate and Chinese Tea.....	252
9.9.9	Soybean	252
9.9.10	<i>Aloe vera</i>	253
9.9.11	Resveratrol.....	254
9.9.12	Coffee.....	255
	References	256

Chapter 10 Selected Botanicals and Plant Products That Lower Blood Glucose (Continued)..... 265

10.1	Lychee—Lowering Blood Sugar by Inhibiting Gluconeogenesis	265
10.1.1	Nutrients, Antioxidants, and Other Constituents of Lychee	265
10.1.2	Methylene Cyclopropyl-Alanine (a.k.a. Hypoglycin A) and Gluconeogenesis	267
10.1.3	Inhibition of Aldose Reductase May Prevent Cataract Formation.....	267
10.1.4	Multiple Protective Functions of Oligonol from Lychee.....	269
10.1.4.1	Safety of Oligonol.....	271
10.1.5	Lychee and Glycemic Control	272
10.1.6	Effect of Lychee Fruit Extract (Oligonol) on Peripheral Circulation.....	273
10.1.7	Antioxidant Activity of Lychee.....	273
10.1.8	Lychee: Cautions, Contraindications, and Interactions with Medications	274
10.2	Milk Thistle (<i>Silybum marianum</i>).....	275
10.2.1	Composition of Milk Thistle	275
10.2.2	Pharmacology—Absorption.....	276
10.2.3	Milk Thistle and Hyperglycemia	277
10.2.3.1	Combining Milk Thistle with <i>Berberis vulgaris</i>	279
10.2.4	Antioxidant and Anti-Inflammatory Profile of <i>S. marianum</i>	279
10.2.5	Safety of Milk Thistle	280
10.3	Berberine	281
10.3.1	The Effects of Berberine on Hyperglycemia	281
10.3.2	Berberine in Insulin Resistance and Polycystic Ovary Syndrome... 283	
10.3.3	What Is a Safe and Effective Dose of Berberine?.....	283
10.3.3.1	Berberine May Be Hazardous in Pregnancy	283

10.4	The Antihyperglycemic Effect of Selected Mushrooms	284
10.4.1	Mushrooms That Lower Blood Glucose	285
10.4.2	Anti-Inflammatory Mushrooms	286
10.4.3	A Note of Caution	286
10.5	Safflower (<i>Carthamus tinctorius</i> L.) Seeds, Extract, and Oil Lower Blood Glucose	286
10.6	Flax (<i>Linum usitatissimum</i>) Seeds, Extract, and Oil Lower Blood Glucose	288
10.6.1	Secoisolariciresinol Diglucoside, a “New Antidiabetic Agent”	289
10.7	Antihyperglycemic Effects of Bitter Melon (<i>Momordica charantia</i>)	290
10.7.1	Active Constituents and Mode of Action of Bitter Melon	290
10.7.2	Bitter Melon Lowers Blood Glucose	292
10.7.3	Drug–Botanical Interactions, Side Effects, and Toxicity	294
	References	294

Chapter 11	Selected Functional Foods That Combat the Effects of Hyperglycemia and Chronic Inflammation	303
11.1	Hyperglycemia and Chronic Systemic Inflammation	303
11.2	Functional Foods	304
11.3	The Two-Pronged Approach to Antioxidation	304
11.4	Inflammation Causes Oxidative Stress	305
11.5	C-Reactive Protein—A Standard Marker of Inflammation	305
11.6	CRP and Chronic Hyperglycemia	306
11.6.1	Statin Therapy and CRP Level in Type 2 Diabetes— The Controversy	307
11.7	Selected Functional Foods That Fight Inflammation and Support Glycemic Control	307
11.8	Ginger (<i>Zingiber officinale</i> Roscoe)	307
11.8.1	Ginger and Chronic Hyperglycemia	308
11.8.2	How Safe Is Consumption of Ginger?	309
11.9	Green Tea	310
11.9.1	Tea Reduces Inflammation	311
11.9.2	(Mostly Green) Tea and Type 2 Diabetes	311
11.9.3	Tea Reduces Inflammation and Protects Blood Vessels by Promoting Endothelium NO Formation	313
11.9.4	It Is Best to Leave Out the Milk	313
11.9.5	Green Tea versus Black Tea. Brewing “Loose” Tea versus Tea Bags—The Case for Lower Oxalate Levels	314
11.9.6	Is It Safe to Drink a Lot of Tea?	314
11.10	Beets (Beetroot— <i>Beta vulgaris</i>) Are Anti-Inflammatory and Antiglycemic	315
11.10.1	The Case for Beets in Supplement Form versus Whole Beets	316
11.10.2	Antioxidant and Anti-Inflammatory Properties of Beets	317
11.10.3	Beets Promote NO Synthesis with the Help of Oral Bacteria	318
11.10.4	Beet Fiber Also Improves Hyperglycemia	319
11.10.5	Caveat	319
11.11	Chili Peppers	319
11.11.1	<i>Capsicum baccatum</i> Is Anti-Inflammatory and It Has Been Said to Help Lower Blood Glucose	320

11.11.2	Types and Concentration of Carotenoids in Different Chili Fruits	322
11.11.3	Safety of Consumption of Chili	322
11.12	Cinnamon	323
11.12.1	Cinnamon Is Antioxidant and Anti-Inflammatory.....	323
11.12.2	Equivocal Data on Glycemic Control by Cinnamon in Chronic Hyperglycemia	324
11.12.3	Safety of Consuming Cinnamon	325
11.13	Edible Seaweed, a Sea Vegetable	325
11.13.1	Kelp Is on the Way	326
11.13.2	Iodine Content of Different Varieties.....	327
11.13.3	Sea Vegetables Hold Potent Antioxidants	327
11.13.4	Anti-Inflammatory and Antidiabetic Properties of Seaweeds	328
11.13.4.1	Antiobesity Effect of Fucoxanthin in Seaweed	329
11.13.4.2	Antidiabetic Effect of Fucoxanthin	330
11.13.4.3	Anti-Inflammatory Effect of Fucoxanthin	331
11.13.5	Fucoxanthin as a Dietary Supplement.....	331
11.13.6	Health Risk of Excessive Iodine Intake	331
11.13.7	Interaction with Medications.....	332
11.14	Mushrooms: Shitake and Other Fungi with Antidiabetic Properties.....	332
11.14.1	Antidiabetic and Antioxidant Activity of Selected Mushrooms	333
11.15	Turmeric	334
11.15.1	Curcumin Is Antioxidant and Anti-Inflammatory	334
11.15.2	Turmeric, Curcumin, and Glycemic Control	335
11.15.3	How Safe Is It to Consume Curcumin?.....	337
	References	337

Chapter 12 Functional Foods Continued: White Mulberry (*Morus Alba*) Leaf Extract and Tea..... 347

12.1	Introduction	347
12.2	The Complex of Active Agents in Mulberry Leaf	347
12.3	Antioxidant and Anti-Inflammatory Property of White Mulberry Leaf or Extract Flavonoids.....	348
12.3.1	Cytotoxicity of <i>M. alba</i> (Variety <i>Baramatiwali</i>).....	349
12.4	Caution.....	349
12.5	1-Deoxynojirimycin.....	349
12.5.1	Leaf DNJ Concentration	350
12.6	DNJ Lowers Postprandial Blood Glucose	351
12.6.1	“Sugar-Coating” Glycemic Control	353
12.7	Comparing DNJ to Glyburide	353
12.8	The Proprietary Formulation Reducose and Postprandial Blood Glucose Level	354
12.9	The Hazards of Frequent Hypoglycemia.....	354
12.10	Effect of <i>M. alba</i> Extract on Blood Pressure	355
12.11	Effects of Mulberry Leaf Extract on Plasma Lipids	355
12.11.1	Effects of Mulberry Leaf Extract on Systemic Inflammation in Dyslipidemia	357
12.12	1-DNJ Enhances Insulin Sensitivity	358
12.13	<i>M. alba</i> Inhibits Platelet Aggregation	358
12.14	Reducose® (Phynova Group Limited), a Patented Commercial Standardized Water-Soluble Extract of <i>M. alba</i> Leaves	358

12.15	Commercially Available Formulation Products	359
12.15.1	Caveat Emptor	360
12.15.2	How the Silkworm (<i>B. mori</i> L.) Could Help in Treatment of Diabetic Nephropathy	360
12.15.3	How to Make Mulberry Tea	361
12.15.4	Safety of Consuming White Mulberry Leaf in Tea or in Any Other Form	362
12.16	White Mulberry Supplementation in Treatment of Obesity	363
12.17	Two Relevant Additional Benefits of <i>M. alba</i>	363
12.18	A Note of Caution Concerning High Potassium Levels in Certain Botanical/Herbal Supplement	364
	References	364

Chapter 13	Selected Supplements That Support Glycemic Control and Reduce Chronic Inflammation	369
13.1	Selected Supplements That Lessen Chronic Hyperglycemia and Lower Systemic Inflammation	369
13.1.1	What Are “Supplements”?	370
13.2	Measuring Insulin Sensitivity and Insulin Resistance: The Clamp Technique and the Oral Glucose Tolerance Test	371
13.3	Alpha-Lipoic Acid	372
13.3.1	The Pharmacology of the Antioxidant ALA	373
13.3.2	Clinical Application of ALA as Antioxidant and Anti-Inflammatory	373
13.3.3	The Antidiabetic Properties of ALA	374
13.3.4	Dietary Uptake, Safety, and Toxicity	375
13.3.5	ALA in Treatment of Diabetic Polyneuropathy	376
13.4	L-Arginine	376
13.4.1	NO Bioavailability Naturally Declines with Age	378
13.4.2	The Arginine Paradox	378
13.4.3	Measuring NO Concentration Directly after L-Arginine Supplementation	379
13.4.4	Oral L-Arginine Reduces Inflammation	379
13.4.5	Oral L-Arginine Improves Damaged and Aging Endothelium	380
13.4.5.1	The Role of ADMA in Endothelial Dysfunction and Type 2 Diabetes	380
13.4.6	L-Arginine, Insulin Resistance, and Type 2 Diabetes	381
13.4.7	Oral Supplementation of L-Arginine in Adjunctive Treatment of Type 2 Diabetes	381
13.4.8	Caveat	382
13.5	L-Carnitine	383
13.5.1	The Benefits of L-Carnitine Supplementation in Type 2 Diabetes	383
13.5.2	The Benefits of L-Carnitine Supplementation in Chronic Systemic Inflammation	384
13.5.3	Safety of Supplementing with L-Carnitine	385
13.5.3.1	Carnitine and Medication Interactions	385

13.6	Gamma-Linoleic Acid and Alpha-Linoleic Acid	386
13.6.1	Evening Primrose (<i>Oenothera biennis</i> L.) Oil and Borage (<i>Borago officinalis</i>) Oil	386
13.6.2	ALA and GLA Reduce Inflammation and Help in the Treatment of Metabolic Syndrome, Diabetes, and Diabetes Complications.....	387
13.6.3	Precautions	389
13.7	Fish Oil	390
13.7.1	Fish Oil Has Anti-Inflammatory Properties	391
13.7.2	Fish Oil Benefits Glycemic Control	391
13.7.3	Fish Oil and Dyslipidemia in Type 2 Diabetes	394
13.7.4	Fish Oil and Nephropathy in Type 2 Diabetes	395
13.7.5	Precautions	395
	13.7.5.1 Possible Adverse or Beneficial Interactions with Medications	396
	References	397

Chapter 14	Additional Supplements That Support Glycemic Control and Reduce Chronic Inflammation	405
14.1	Taurine.....	405
14.1.1	Taurine Reduces Oxidative Stress and Inflammation.....	405
14.1.2	Taurine and Diabetes.....	406
	14.1.2.1 Plasma Taurine Levels Are Lower than Normal in Diabetes	406
14.1.3	Taurine Reduces the Production of Advanced Glycation End Products	407
14.1.4	Taurine Prevents LDL Modification	407
14.1.5	Taurine Prevents Endothelial Dysfunction.....	407
14.1.6	Taurine Ameliorates Diabetic Retinopathy.....	408
14.1.7	Taurine and Diabetic Cataracts.....	409
14.1.8	Taurine Ameliorates Diabetic Neuropathy	410
14.1.9	Clinical Applications of Taurine Supplementation in Diabetes.....	410
14.1.10	Safety of Supplementing with Taurine.....	411
14.2	The Role of Selected Vitamins in Type 2 Diabetes.....	411
14.2.1	Vitamin D3 (Cholecalciferol).....	411
	14.2.1.1 The Range of Serum Levels of Vitamin D— 25-Hydroxyvitamin D.....	412
	14.2.1.2 The Role of Vitamin D3 in Type 2 Diabetes	412
	14.2.1.3 Vitamin D3 Status and HbA1c	413
	14.2.1.4 Safety of Vitamin D3 Supplementation.....	414
14.2.2	Niacin (Vitamin B3) and Type 2 Diabetes: A Cautionary Note	414
14.2.3	Vitamin B6 (Pyridoxine).....	415
	14.2.3.1 The Range of Adequate Body Levels of Vitamin B6.....	415
	14.2.3.2 Food Sources of Vitamin B6	415
	14.2.3.3 Vitamin B6 Levels and Supplementation in Treatment of Type 2 Diabetes and Its Complications.....	415
	14.2.3.4 Health Risks of Excessive Vitamin B6.....	417
	14.2.3.5 Interactions with Medications	417

14.2.4	Vitamin B12 (Cobalamin)	418
14.2.4.1	Vitamin B12 and Type 2 Diabetes	418
14.2.4.2	Supplementation and Safety of Vitamin B12.....	418
14.2.5	Folic Acid (Vitamin B9).....	419
14.2.5.1	Folic Acid and Type 2 Diabetes.....	419
14.2.5.2	Folic Acid: Reference Range and Safety of Supplementation	420
14.3	Chromium III. Chromium Deficiency and Supplementation in Type 2 Diabetes	421
14.3.1	Is There Chromium Deficiency in Type 2 Diabetes?.....	422
14.3.2	Chromium Supplementation with Brewer's Yeast.....	423
14.3.2.1	Chromium Supplementation with Chromium Picolinate... ..	423
14.3.2.2	Estimated Safe and Adequate Daily Dietary Intake of Chromium.....	424
14.3.2.3	Combining Chromium with Biotin in the Supplementation	424
14.3.2.4	Safety of Biotin Supplementation	426
14.4	Type 2 Diabetes and Coenzyme Q10 (CoQ10) Deficiency	426
14.4.1	CoQ10 Reference Interval	426
14.4.2	CoQ10, Insulin Resistance, and Type 2 Diabetes	427
14.4.3	Safety of CoQ10 Supplementation	428
14.4.4	Re. CoQ10 Depletion: Statins and Diabetes, a Cautionary Note	428
14.5	Magnesium Is Antidiabetic and Cardioprotective.....	429
14.5.1	Magnesium Supplementation Supports Glycemic Control	430
14.5.2	Dietary Magnesium Deficiency Is Linked to Hyperglycemia	432
14.5.3	Mg: The Link to Cardiovascular and Heart Conditions	433
14.6	Zinc Is Anti-Inflammatory and Antidiabetic	433
14.6.1	The Role of Zinc in Glycemic Control.....	433
14.6.2	Zinc Is Antioxidant and Anti-Inflammatory.....	435
14.7	Final Note	435
	References	436
	Appendix: Summary of the Therapeutic Agents, Their Actions, and Side Effects	447
	Index.....	453
