<i>Foreword</i>	xiii
<i>Preface</i>	xv
<i>Acknowledgments</i>	xvii
<i>List of Abbreviations and Symbols</i>	xix
1 Diagnosing and Classifying Diabetes	1
Key points	1
What is diabetes mellitus?	2
Prevalence of diabetes	2
Classification of diabetes	3
Overview of normal glucose homeostasis	3
Brain-centric model of glucose homeostasis	10
Metabolic syndrome in children and adolescents	13
Types of diabetes	14
Diagnosing diabetes	22
Preventing diabetes	26
Managing diabetes mellitus	29
Key points	29
Complications of diabetes	36
Aims and objectives of diabetes care	38
Technology and diabetes management	40
A sobering final comment	42
References	43
2 Holistic Personalised Diabetes Care	49
Key points	49
Rationale	49
Shared decision-making (SDM)	50
Holistic diabetes care	51
Communication and the power of language	52
Reading fiction to improve empathy and communication skills	53
Care models	53
Characteristics of an holistic health history	55
References	58
3 Assessing and Monitoring People with Diabetes	61
Key points	61
Rationale	61
Key issues to consider in comprehensive assessments	62
Monitoring glucose levels	62
Monitoring 1: Blood glucose	64
Key points	64

Insulin pumps	75
Monitoring 2: Urine glucose	76
Key points	76
Monitoring 3: Additional assessment	78
Self-care	82
The annual review	83
Summary	83
References	83
4 Nutrition and Weight Management	87
Key points	87
Rationale	87
The importance of good nutrition	88
Malnutrition and undernutrition	88
Method of screening for dietary characteristics and problems	90
Principles of dietary management for people with diabetes	92
Goals of dietary management	95
Overweight and obesity	95
Methods of measuring weight	99
Managing obesity and diabetes	100
Dietary management: overweight and obesity	101
Factors associated with making dietary changes	103
Key points	104
Alcohol	107
Exercise/activity	107
References	108
Further reading	112
5 Medicine Management	113
Key points	113
Introduction	114
QUM	114
QUM and diabetes	114
GLM	117
Medicine interactions	129
Combining GLMs and insulin	130
When should insulin be initiated in Type 2 diabetes?	131
Challenges to initiating insulin therapy	134
Some strategies to overcome the barriers	135
Insulin therapy	136
Types of insulin available	136
Storing insulin	139
Injection sites and administration	140
Mixing short/rapid acting- and intermediate-acting insulins	141
Commonly used insulin regimens	141
Interpreting morning hyperglycaemia	143
CSII	143
Continuous blood glucose sensors	144
Subcutaneous insulin sliding scales and top-up regimens	145
Uses of insulin infusions	147
Insulin allergy	149
Pancreas transplants	150
Stabilising diabetes	150
Stabilising diabetes in hospital	150
Community and outpatient insulin stabilisation	151

Lipid-lowering agents	153
Monitoring lipid medicines	157
Antihypertensive agents	158
Antiplatelet agents	159
Medication safety, adherence, and medication self-management	161
Enhancing medication self-care	163
Example protocol for outpatient stabilisation onto insulin	166
References	167
6 Hypoglycaemia	175
Key points	175
Rationale	175
Introduction	176
The counter-regulatory response	178
Definition of hypoglycaemia	179
Recognising hypoglycaemia	182
The brain and glucose homeostasis	183
Causes of hypoglycaemia	183
Preventing and managing hypoglycaemia	184
Hypoglycaemic unawareness	185
Prevalence of HU	186
Nocturnal hypoglycaemia	187
Relative hypoglycaemia	189
Medicine interactions	189
Objectives of care	190
Treatment	190
Prolonged hypoglycaemia	191
Patients most at risk of hypoglycaemia	192
Psychological effects of hypoglycaemia	193
Guidelines for administering glucagon	194
Adverse reactions	195
References	196
7 Hyperglycaemia, Acute Illness, Diabetic Ketoacidosis (DKA), Hyperosmolar Hyperglycaemic States (HHS), and Lactic Acidosis	199
Key points	199
Rationale	200
Prevention: proactively managing intercurrent illness	200
Self-care during illness	202
Hyperglycaemia	202
Diabetic ketoacidosis (DKA)	204
Brittle diabetes and hyperglycaemia	211
Euglycaemic DKA	211
Hyperosmolar hyperglycaemic states	212
Lactic acidosis	214
References	216
8 Long-Term Complications of Diabetes	219
Key points	219
Introduction	220
Diabetes and complexity	220
Pathophysiology of diabetes complications	221
Cardiovascular disease and diabetes	223
Key points	223
Cerebrovascular disease	236

Diabetes and eye disease	237
Diabetes and renal disease	243
Peripheral and autonomic neuropathy	255
Autonomic neuropathy	266
References	270
9 Management in Hospital, Surgery, and Investigations	279
Emergency department	279
Key points	279
Surgical procedures	280
Key points	280
Preoperative care	284
Postoperative care	289
Guidelines for informing people with diabetes about what they should do prior to surgical procedures	290
Insulin pump therapy in patients undergoing surgery	292
Emergency procedures	292
Bariatric surgery	293
Investigative procedures	293
Key points	293
The objectives of care	294
General management	294
Eye procedures	295
Complementary medicines and other therapies during surgery and investigative procedures	298
Preoperative phase	298
Postoperative phase	299
Implications for care	299
References	300
Example Information 2(a): Instructions for people with diabetes on oral glucose-lowering medicines having procedures as outpatients under sedation of general anaesthesia	301
Example Instruction Sheet 2(b): Instructions for people with diabetes on insulin having procedures as outpatients under sedation or general anaesthesia	302
10 Conditions Associated with Diabetes	303
Key points	303
Introduction	303
Enteral and parenteral nutrition	304
Diabetes and cancer	309
Smoking, alcohol, and illegal drug use	315
Brittle or labile diabetes	326
Oral health and diabetes	328
Diabetes and liver disease	329
Haemochromatosis	332
Diabetic mastopathy	333
Diabetes and coeliac disease	334
Cystic fibrosis-related diabetes	336
Incontinence	338
Sleep disturbance and diabetes	340
Diabetes and tuberculosis	341
Diabetes and HIV/AIDS	342
Diabetes and hearing loss	343

Diabetes, musculoskeletal disease, and osteoporosis	345
Corticosteroid medications and diabetes	347
Key points	347
Diabetes and driving	350
Diabetes and fasting for religious observances	359
Education and counselling	359
References	360
11 Sexual and Reproductive Health	371
Key points	371
Rationale	371
Sexual health	372
Sexual development	373
Sexual problems	374
Possible causes of sexual difficulties and dysfunction	374
Sexuality and older people	375
Women	376
Men	377
Sexual counselling	380
Role of the clinician	383
References	383
12 Diabetes and Older People	385
Key points	385
Rationale	386
Introduction	386
Determining functional status	392
Geriatric syndromes	394
Cognitive functioning and dementia	395
Depression and older people with diabetes	400
Dementia	400
Caring for older people with diabetes	401
Education approaches	408
Self-care	409
Factors that can affect metabolic control	410
Overall care strategies	417
References	418
13 Diabetes in Children and Adolescents	425
Key points	425
Rationale	425
Introduction	426
Impact of hyper- and hypoglycaemia on brain development and function	429
Managing children and adolescents with diabetes	430
Aspects of care that apply to both type 1 and type 2 diabetes in children and adolescents	430
Managing type 1 diabetes	431
Managing type 2 diabetes	433
Medicine self-management	436
Other conditions associated with diabetes	436
Strategies for enhancing adherence during adolescence	437
Ketoacidosis in children	438
Complementary therapy use in children	438
References	439

14	Women, Pregnancy, and Gestational Diabetes	443
	Key points	443
	Rationale	443
	Polycystic ovarian syndrome	444
	Contraception options for women with diabetes	447
	Pregnancy	449
	Gestational diabetes	455
	Menopause and diabetes	459
	References	462
15	Psychological and Quality of Life Issues Related to Having Diabetes	467
	Key points	467
	Rationale	468
	Introduction	468
	Clinician factors	469
	Adjustment and spirituality	472
	Diabetes: reputation and myths	473
	Diabetes-related distress	474
	Quality of life	474
	Diabetes and depression	476
	Mental health and type 1 diabetes	480
	Mental health and type 2 diabetes	480
	Psychological distress and cardiovascular disease	481
	Psychiatric disorders, diabetes, and antipsychotic medicines	482
	Diabetes conversations and language	483
	References	486
	Further reading	490
16	Diabetes Education	491
	Key points	491
	Rationale	492
	Introduction	492
	Learning styles	495
	Education and other theories/models	497
	Communication – having good conversations	500
	Teaching: an art and a process	503
	Health literacy	504
	Survival skills	507
	Empowerment	508
	Special issues	509
	The clinicians' role in diabetes education	509
	Documenting diabetes education	512
	Evaluating diabetes education	515
	References	517
	Further reading	521
17	Managing Diabetes at the End of Life	523
	Key points	523
	Introduction	524
	Explanation of terms: values, life limiting illness, palliative care, terminal care, and end-of-life care	524
	Palliative care	525
	General management considerations for managing diabetes at the end of life	531
	Diabetes-specific considerations	532

Medicine management	534
Type 1 diabetes	534
Nutrition and hydration	536
Diabetogenetic medicines	537
Supporting family/carers	538
Withdrawing treatment	539
Diabetes education	539
References	540
18 Complementary Medicine	543
Key points	543
Rationale	543
Introduction	544
CAM philosophy	546
Integrating complementary and conventional care	547
Can Complementary Therapies Benefit People with Diabetes?	549
Spirituality	552
CM and surgery	552
Herb/medicine interactions	556
How can CM be used safely?	556
Clinician responsibilities	560
Identifying quality health information on the internet	561
Recommended resources	563
References	563
