# CONTENTS IN BRIEF

---

- 1 Overview of the Immune System, 1
- 2 Cells and Tissues of the Immune System, 13
- 3 Cells of the Innate Immunity, 28
- 4 Complement, 42
- 5 Immunogens and Antigens, 58
- 6 Antibody Structure, Function, and Interactions with Antigen, 70
- 7 Organization and Expression of Lymphocyte Antigen Receptor Genes, 98
- 8 The Major Histocompatibility Complex and Antigen Presentation, 116
- 9 B-Cell Development and Activation, 136
- 10 T-Cell Development and Activation, 154
- 11 Cytokines, 191
- 12 Tolerance and Autoimmunity, 209
- 13 Hypersensitivity: Type I, 233
- 14 Hypersensitivity: Types II and III, 249
- 15 Hypersensitivity: Type IV, 259
- 16 Immunodeficiency Disorders and Neoplasias of the Lymphoid System, 267
- 17 Transplantation, 299
- 18 Tumor Immunology, 313
- 19 Resistance and Immunization to Infectious Diseases, 327
- 20 Experimental Systems and Methods, 350

# CONTENTS

**About the Author, x**

**Contributors, xi**

**Preface and Acknowledgments to the Eighth Edition, xii**

**How to Use Your Textbook, xiv**

**About the Companion Website, xvi**

## **1 Overview of the Immune System, 1**

Introduction, 1  
Innate and Adaptive Immunity, 2  
Hematopoiesis and the Development of the Immune System, 3  
Clonal Selection Theory, 4  
Active, Passive, and Adoptive Immunization, 6  
Humoral and Cellular Immunity, 7  
Immune Balance, 9  
Generation of Diversity in the Immune Response, 9  
Benefits of Immunology, 10  
Damaging Effects of the Immune Response, 10  
The Future of Immunology, 11  
The Short Course Begins Here, 11

## **2 Cells and Tissues of the Immune System, 13**

Introduction, 13  
The Lymphatic System, 13  
Major Hematopoietic Cells, 16  
Lymphocyte Migration and Recirculation, 23  
The Fate of Antigen after Penetration, 24

## **3 Cells of the Innate Immunity, 28**

Introduction, 28  
Physical and Chemical Barriers of Innate Immunity, 28  
Cells of the Innate Immune System, 30  
Pattern Recognition: A Major Feature of Innate Immune Responses, 31  
Complement, 33  
The Inflammatory Response, 35

## **4 Complement, 42**

Introduction, 42  
Overview of Complement Activation, 42  
Regulation of Complement Activity, 47  
Biological Activities of Complement, 49  
Complement Deficiencies, 53

## **5 Immunogens and Antigens, 58**

Introduction, 58  
Requirements for Immunogenicity, 58  
Primary and Secondary Responses, 61  
Antigenicity and Antigen-Binding Site, 61  
Epitopes Recognized by B Cells and T Cells, 62  
Major Classes of Antigens, 63  
Binding of Antigen with Antigen-Specific Antibodies or T Cells, 64  
Cross-Reactivity, 64  
Adjuvants, 65

## **6 Antibody Structure, Function, and Interactions with Antigen, 70**

Introduction, 70  
Isolation and Characterization of Immunoglobulins, 71  
Structure of Light and Heavy Chains, 71  
Domains, 73  
Hinge Region, 74  
Variable Region, 74  
Immunoglobulin Variants, 75  
Structural and Biological Properties of IgG, 78  
Structural and Biological Properties of IgM, 82  
Structural and Biological Properties of IgA, 83  
Structural and Biological Properties of IgD, 84  
Structural and Biological Properties of IgE, 84  
Kinetics of the Antibody Response following Immunization, 85  
The Immunoglobulin Superfamily, 86  
Antigen–Antibody Interactions, 86  
Secondary Interactions between Antibody and Antigen, 89

- 7 Organization and Expression of Lymphocyte Antigen Receptor Genes, 98**  
 Introduction, 98  
 A Brief Review of Gene Structure and Gene Expression, 98  
 B-Cell Antigen-Specific Receptors and Receptor Genes, 100  
 Genetic Events in Synthesis of Ig Chains, 101  
 Immunoglobulin Class Switching, 104  
 Generation of Antibody Diversity, 106  
 Role of Activation-Induced Cytidine Deaminase in Generating Antibody Diversity, 107  
 T-Cell Antigen-Specific Receptors and Receptor Genes, 107  
 Genes Coding for T-Cell Receptors, 111  
 Generation of T-Cell Receptor Diversity, 111
- 8 The Major Histocompatibility Complex and Antigen Presentation, 116**  
 Introduction, 116  
 How the MHC Got Its Name, 116  
 MHC Role in Antigen Presentation, 117  
 Different MHC Molecules are Expressed by Distinct Host Cells and Interact with Different Sets of T Cells, 118  
 Variability of MHC Class I and MHC Class II Molecules, 118  
 Structure of MHC Class I and Class II Molecules, 119  
 Antigen Processing and Presentation: How MHC Molecules Bind Peptides and Create Ligands that Interact with T Cells, 123  
 Other Types of Antigen that Activate T-Cell Responses, 128  
 Genes of the HLA Region, 129  
 Nomenclature of Polymorphic MHC Molecules, 130  
 Regulation of Expression of MHC Genes, 130  
 MHC in Other Species, 131  
 Diversity of MHC Molecules: MHC Association with Resistance and Susceptibility to Disease, 132
- 9 B-Cell Development and Activation, 136**  
 Introduction, 136  
 Development of B Lymphocytes, 136  
 Genetics of Immunoglobulin Gene Rearrangements, 137  
 Negative Selection and the Development of Central Tolerance, 139  
 B-Cell Activation, 140  
 B-Cell Membrane Proteins, 146
- 10 T-Cell Development and Activation, 154**  
 Introduction, 154  
 The Antigen-Specific T-Cell Receptor, 154  
 Genes Coding for T-Cell Receptors, 160  
 Generation of T-Cell Receptor Diversity, 160  
 T-Cell Differentiation in the Thymus, 161  
 Activation and Function of T Cells, 166  
 A Two-Signal Model for the Activation of T Cells, 167  
 Dendritic Cells are the Key APC for Naïve T Cells, 167  
 Activation of CD4<sup>+</sup> T Cells, 169  
 CD4<sup>+</sup> T-Cell Function, 174  
 Activation and Function of CD8<sup>+</sup> T Cells, 181  
 Memory T Cells, 184  
 Function of Other Subsets of T Cells, 185
- 11 Cytokines, 191**  
 Introduction, 191  
 The History of Cytokines, 191  
 General Properties of Cytokines, 192  
 Functional Categories of Cytokines, 194  
 Cytokine Receptors, 200  
 Cytokine Receptor-Mediated Signal Transduction, 201  
 Role of Cytokines and Cytokine Receptors in Disease, 203  
 Therapeutic Exploitation of Cytokines and Cytokine Receptors, 204
- 12 Tolerance and Autoimmunity, 209**  
 Introduction, 209  
 Central Tolerance, 210  
 Peripheral Tolerance, 212  
 Oral Tolerance, 215  
 Immune Privilege, 216  
 Autoimmunity Versus Autoimmune Disease, 216  
 Autoimmune Diseases, 221
- 13 Hypersensitivity: Type I, 233**  
 Introduction, 233  
 General Characteristics of Allergic Reactions, 234  
 Sensitization Phase, 234  
 Activation Phase, 235  
 Effector Phase, 237  
 Clinical Aspects of Allergic Reactions, 240  
 Clinical Tests for Allergies and Clinical Intervention, 242  
 The Protective Role of IgE, 244
- 14 Hypersensitivity: Types II and III, 249**  
 Introduction, 249  
 Type II Hypersensitivity, 249  
 Examples of Type II Hypersensitivity Reactions, 251  
 Type III Hypersensitivity, 252

- 15 Hypersensitivity: Type IV, 259**  
Introduction, 259  
General Characteristics and Pathophysiology of DTH, 259  
Examples of DTH, 261  
Treatment of DTH, 264
- 16 Immunodeficiency Disorders and Neoplasias of the Lymphoid System, 267**  
Introduction, 267  
Immunodeficiency Syndromes, 268  
Acquired Immunodeficiency Syndrome, 283  
Neoplasms of Lymphoid System, 288
- 17 Transplantation, 299**  
Introduction, 299  
Relationship between Donor and Recipient, 299  
Immune Mechanisms are Responsible for Allograft Rejection, 301  
Categories of Allograft Rejection, 301  
Role of MHC Molecules in Allograft Rejection, 302  
Role of T-Cell Lineages and Cytokines in Allograft Rejection, 303  
Laboratory Tests Used in Tissue Typing, 304  
Prolongation of Allograft Survival: Immunosuppressive Therapy, 306  
Hematopoietic Stem Cell Transplantation, 308  
Graft-Versus-Host Disease, 309  
Xenogeneic Transplantation, 309  
The Fetus: A Tolerated Allograft, 310
- 18 Tumor Immunology, 313**  
Introduction, 313  
Tumor Antigens, 314  
Tumor Immunity, 315  
The Immunosuppressive Actions of Tumor Cells, 318  
Immunotherapy, 319
- 19 Resistance and Immunization to Infectious Diseases, 327**  
Introduction, 327  
Host Defense Against the Various Classes of Microbial Pathogens, 329  
Mechanisms by which Pathogens Evade the Immune Response, 333  
Principles of Immunization, 335  
Objectives of Immunization, 336  
Active Immunizations, 336  
Basic Mechanisms of Protection, 338  
Vaccine Precautions, 340  
Recent Approaches to Production of Vaccines, 341  
Passive Immunization, 343
- 20 Experimental Systems and Methods, 350**  
Introduction, 350  
Immunoassays, 350  
Immunofluorescence, 353  
Flow Cytometry, 353  
Immunoabsorption and Immunoabsorption, 354  
Cellular Assays, 355  
Cell Culture, 356  
Experimental Animal Models, 359  
Inbred Strains, 360  
Transgenic Mice and Gene Targeting, 360  
Analysis of Gene Expression, 362
- Glossary, 365**  
**Appendix: Partial List of CD Antigens, 399**  
**Index, 404**
