### List of Contributors xi

## 1 Introduction: Materials Chemistry as a Means to an End(o) – The Invisible Foundation 1

*Brian W. Darvell*

- 1.1 Introduction 1
- 1.2 The Substrate 2
- 1.3 Nomenclatural Hype: ‘Bioactivity’, ‘Bioceramics’ 3
- 1.4 Chemical Interactions and Irrigation 6
- 1.5 Terminology 9
- 1.6 Classification of HSCs 11
- 1.7 Conclusion 12
- References 13

## 2 Pulp Capping Materials for the Maintenance of Pulp Vitality 15

*Phillip L. Tomson and Henry F. Duncan*

- 2.1 Introduction 16
- 2.2 Maintaining Pulp Vitality 16
  - 2.2.1 Why Maintain the Pulp? 16
  - 2.2.2 Pulpal Irritants 16
  - 2.2.3 Pulpal Healing After Exposure 17
  - 2.2.4 Classifications of Pulpitis and Assessing the Inflammatory State of the Pulp 18
  - 2.2.5 Is Pulpal Exposure a Negative Prognostic Factor? 19
  - 2.2.6 Soft Tissue Factors Related to the Tooth 19
- 2.3 Clinical Procedures for Maintaining Pulp Vitality 21
  - 2.3.1 Managing the Unexposed Pulp 21
  - 2.3.2 Tooth Preparation to Avoid Exposure 21
  - 2.3.3 Managing the Exposed Pulp 21
    - 2.3.3.1 Direct Pulp Capping 22
    - 2.3.3.2 Partial Pulpotomy 22
    - 2.3.3.3 Full Pulpotomy 22
    - 2.3.3.4 Pulpectomy 23
  - 2.3.4 Immature Roots 24
- 2.4 Materials Used in Vital Pulp Treatment 25
  - 2.4.1 The Role of the Material 25
  - 2.4.2 Calcium Hydroxide 25
  - 2.4.3 Resin-Based Adhesives 27

### **4 Endodontic Instruments and Canal Preparation Techniques 81**

*Laurence Jordan, Francois Bronnec, and Pierre Machtou*

|       |                                                         |    |
|-------|---------------------------------------------------------|----|
| 4.1   | Classification and Components of Endodontic Instruments | 82 |
| 4.1.1 | Brief History                                           | 82 |

|         |                                                                                    |     |
|---------|------------------------------------------------------------------------------------|-----|
| 4.1.2   | Alloys                                                                             | 84  |
| 4.1.2.1 | Carbon Steel versus Stainless Steel                                                | 84  |
| 4.1.2.2 | Nickel–Titanium                                                                    | 84  |
| 4.1.3   | Manufacture and Standardization                                                    | 85  |
| 4.1.3.1 | Standardization of Stainless-Steel Instruments                                     | 85  |
| 4.1.3.2 | Design of Endodontic Instruments: Terms and Definitions                            | 86  |
| 4.1.3.3 | Physical Properties of Endodontic Instruments: Terms and Definitions               | 90  |
| 4.1.4   | Cleaning and Shaping Instruments                                                   | 90  |
| 4.1.4.1 | Group 1: Instruments for Hand Use (K-Files, H-Files, Barbed Broaches, Rasps)       | 90  |
| 4.1.4.2 | Group 2: Engine-Driven Latch-Type Instruments                                      | 94  |
| 4.1.4.3 | Group 3: Engine-Driven NiTi Rotary Instruments                                     | 94  |
| 4.1.4.4 | Group 4: Engine-Driven Instruments that Adapt Themselves to the Root Canal Anatomy | 98  |
| 4.1.4.5 | Group 5: Engine-Driven Reciprocating Instruments                                   | 99  |
| 4.1.4.6 | Group 6: Sonic and Ultrasonic Instruments                                          | 99  |
| 4.2     | Properties of NiTi Alloys and Improvements by Thermomechanical Treatments          | 101 |
| 4.2.1   | Martensitic Transformation                                                         | 101 |
| 4.2.2   | Pseudoelastic Properties                                                           | 102 |
| 4.2.3   | Transformation Temperatures                                                        | 104 |
| 4.2.4   | Manufacturing Processes                                                            | 105 |
| 4.2.5   | Flexibility                                                                        | 109 |
| 4.2.6   | Clinical Implications                                                              | 112 |
| 4.3     | Concepts in Root Canal Shaping                                                     | 112 |
| 4.3.1   | Instrument Motions                                                                 | 113 |
| 4.3.2   | Canal Management Strategies                                                        | 114 |
| 4.4     | Conclusion                                                                         | 124 |
|         | References                                                                         | 125 |

## **5 Irrigating Solutions, Devices, and Techniques** 133

*Christos Boutsoukis and Maria Teresa Arias-Moliz*

|          |                                   |     |
|----------|-----------------------------------|-----|
| 5.1      | Introduction                      | 134 |
| 5.2      | Irrigating Solutions              | 134 |
| 5.2.1    | Sodium Hypochlorite               | 134 |
| 5.2.2    | Chlorhexidine                     | 136 |
| 5.2.3    | Ethylenediamine Tetraacetic Acid  | 136 |
| 5.2.4    | Citric Acid                       | 137 |
| 5.2.5    | Etidronic Acid                    | 138 |
| 5.2.6    | Maleic Acid                       | 138 |
| 5.2.7    | Ozonated Water                    | 138 |
| 5.2.8    | Electrochemically Activated Water | 139 |
| 5.2.9    | Saline                            | 139 |
| 5.2.10   | Mixtures of Irrigating Solutions  | 139 |
