

Section 1 Introduction and Background

1. Development of the pharmaceutical industry
2. Nature of disease and purpose of therapy
3. Therapeutic modalities

Section 2 Drug Discovery

4. Drug target identification
5. Selecting the modality and planning the project
6. High throughput screening
7. Medicinal Chemistry
8. Biopharmaceuticals and related molecules
9. Emerging modalities: nucleotide based therapy, cell based therapy, gene therapy / Novel and Advanced Process
10. Metabolism and Pharmacokinetical strategies.
11. Role of pharmacology to include pharmacology of newer modalities
12. In vitro in vivo translation
13. Vaccines

Section 3 Drug Development

14. Drug development introduction
15. Drug safety
16. Pharmaceutical development
17. Clinical development
18. Clinical imaging
19. Intellectual property
20. Regulatory affairs
21. Marketing and Patient access to medicines

Section 4 Facts and Figures

22. Facts and Figures; and the Future
