

Foreword

Preface

Introduction

**Part 1: Neuroimaging of Circuits**

Chapter 1. A Neural Circuit-Informed Taxonomy for Precision Psychiatry

Chapter 2. The Future of Precision TMS in Psychiatry

Chapter 3. Neural Mechanisms of Bipolar Disorder

**Part 2: Neurocognition, Neurophysiology, and Behavior**

Chapter 4. Information Processing Impairments as Transdiagnostic Treatment Targets

Chapter 5. State-Sensitive Vision Science-Based Markers in People with Schizophrenia

**Part 3: Blood Markers**

Chapter 6. Using Inflammatory Biomarkers to Identify Transdiagnostic Subtypes

Chapter 7. Pharmacogenetic Testing

**Part 4: Translational Neurobiological Approaches**

Chapter 8. Treatment Prediction Biomarkers for Major Depression

Chapter 9. Translational Neurobiological Approaches to Precision Medicine

**Part 5: New Approaches and Computational Models That Bridge Neuroscience Insights and Clinical Application**

Chapter 10. Latent Variable-Based Predictive and Explanatory Disease Models

Chapter 11. Computational Cognitive Methods for Precision Psychiatry

Chapter 12. Toward Precision CBT via Reinforcement Learning Theory

**Part 6: Developing the Academic Discipline of Precision Psychiatry**

Chapter 13. Moving from Precision to Personalized Psychiatry: Clinical Perspectives

Chapter 14. Preparing for the Future of Precision Psychiatry
