

- 1 Brief History of the Cardiovascular System
- 2 Embryology and Etiology
- 2 Conclusions
- 3 Morphologic Anatomy
- 4 Segmental Anatomy
- 5 The Congenital Cardiac Pathology Database
- 6 Systemic Venous Anomalies
- 7 Pulmonary Venous Anomalies
- 8 Cor Triatriatum Sinistrum (Subdivided Left Atrium) and Cor Triatriatum Dextrum (Subdivided Right Atrium)
- 9 Interatrial Communications
- 10 Juxtaposition of the Atrial Appendages
- 11 Common Atrioventricular Canal
- 12 Double-Outlet and Common-Outlet Right Atrium
- 13 Tricuspid Valve Anomalies
- 14 Mitral Valve Anomalies
- 15 Infundibuloarterial Situs Equations: How Normally and Abnormally Related Great Arteries are Built and the Importance of Infundibuloarterial Situs Concordance and Discordance
- 16 Ventricular Septal Defects
- 17 Single Ventricle
- 18 Superoinferior Ventricles
- 19 Anomalous Ifundibular Muscle Bundles
- 20 Tetralogy of Fallot
- 21 Absence of the Subpulmonary Infundibulum with its Sequelae has been Misinterpreted as Common Aortopulmonary Trunk that Probably Does Not Exist
- 22 Transposition of the Great Arteries
- 23 Double-Outlet Right Ventricle
- 24 Double-Outlet Left Ventricle
- 25 Anatomically Corrected Malposition of the Great Arteries
- 26 What Prevents and What Permits the Embryonic Great Arterial Switch?
- 27 Infundibulo-Arterial Situs Equations and Analysis
- 28 The Cardiac Conduction System
- 29 The Heterotaxy Syndromes: Asplenia, Polysplenia, and with Normally Formed but Right-Sided Spleen
- 30 Conclusions
- Appendix
