Preface

xi

Chapter 1 Introduction		1
1.1 Introduction	1	1.3 Major Milestones in the History of NMR and MRI
1.2 Major Steps in an NMR or MRI Experiment, and Two Conventions in Direction	2	1.4 The Organization for a One-semester Course
		4
		6

Part I Essential Concepts in NMR

9

Chapter 2 Classical Description of Magnetic Resonance		11
2.1 Fundamental Assumptions	11	2.8 Fourier Transform and Spectral Line Shapes
2.2 Nuclear Magnetic Moment	12	2.9 CW NMR
2.3 The Time Evolution of Nuclear Magnetic Moment	15	2.10 Radio-frequency Pulses in NMR
2.4 Macroscopic Magnetization	16	2.11 FT NMR
2.5 Rotating Reference Frame	18	2.12 Signal Detection in NMR
2.6 Spin Relaxation Processes	22	2.13 Phases of the NMR Signal
2.7 Bloch Equation	24	
		25
		28
		29
		30
		32
		33

Chapter 3 Quantum Mechanical Description of Magnetic Resonance		37
3.1 Nuclear Magnetism	37	3.5 Macroscopic Magnetization for Spin 1/2
3.2 Energy Difference	39	3.6 Resonant Excitation
3.3 Macroscopic Magnetization	40	3.7 Mechanisms of Spin Relaxation
3.4 Measurement of the x Component of Angular Momentum	41	
		42
		43
		43

Chapter 4 Nuclear Interactions				51	
4.1	Dipolar Interaction	51	4.4	Quadrupole Interaction	61
4.2	Chemical Shift Interaction	54	4.5	Summary of Nuclear Interactions	61
4.3	Scalar Interaction	57			

Part II Essential Concepts in NMR Instrumentation **65**

Chapter 5 Instrumentation				67	
5.1	Magnets	67	5.5	Receiver	78
5.2	Radio-frequency Coil, Its Resonant Circuitry, and the Probe	72	5.6	Pulse Programmer and Computer	78
5.3	Frequency Management	75	5.7	Other Components	78
5.4	Transmitter	76			

Chapter 6 NMR Experimental				81	
6.1	Shimming	81	6.7	Data Accumulation	91
6.2	Preparing Samples	82	6.8	Pre-FFT Processing Techniques	92
6.3	Pulse Sequences and FID	83	6.9	Fast Fourier Transform	95
6.4	Digitization Rate and Digital Resolution	85	6.10	Post-FFT Processing	95
6.5	Dynamic Range	87	6.11	Signal-to-Noise Ratio	97
6.6	Phase Cycling	89			

Chapter 7 Spin Manipulations by Pulse Sequences				101	
7.1	Single Pulse: $90^\circ I_x$, $90^\circ I_y$, $90^\circ I_{-x}$, $90^\circ I_{-y}$	101	7.5	Stimulated Echo Sequence	111
7.2	Inversion Recovery Sequence, Saturation Recovery Sequence, and T_1 Relaxation	103	7.6	Spin-locking and $T_{1\rho}$ Relaxation	112
7.3	Spin-Echo Sequence (Hahn Echo) and T_2 Relaxation	106	7.7	How to Select the Delays in Relaxation Measurement	113
7.4	CPMG Echo Train	110			

Part III Essential Concepts in NMR Spectroscopy **117**

Chapter 8 First-order 1D Spectroscopy				119	
8.1	Nomenclature of the Spin System	119	8.4	Peak Splitting – the Consequence of J Coupling	122
8.2	Peak Shift – the Effect of Chemical Shift	120	8.5	Examples of 1D Spectra	128
8.3	Peak Area – Reflecting the Number of Protons	122			

Chapter 9 Advanced Topics in Spectroscopy				137	
9.1	Double Resonance	137	9.5	Magnetization Transfer	144
9.2	Dipolar Interaction in a Two-spin System	141	9.6	Selective Polarization Inversion/Transfer	146
9.3	Magic Angle	142	9.7	Radiation Damping	147
9.4	Chemical Exchange	143			

Chapter 10 2D NMR Spectroscopy				151	
10.1	Essence of 2D NMR Spectroscopy	151	10.3	<i>J</i> -resolved Spectroscopy	157
10.2	COSY – Correlation Spectroscopy	153	10.4	Examples of 2D NMR Spectroscopy	162

Part IV Essential Concepts in MRI 167

Chapter 11 Effect of the Field Gradient and <i>k</i> -space Imaging				169	
11.1	Spatially Encoding Nuclear Spin Magnetization	170	11.3	Mapping of <i>k</i> Space	174
11.2	<i>k</i> Space in MRI	173	11.4	Gradient Echo	174

Chapter 12 Spatial Mapping in MRI				179	
12.1	Slice Selection in 2D MRI	180	12.6	3D Imaging	196
12.2	Reading a Graphical Imaging Sequence	186	12.7	Fast Imaging in MRI	198
12.3	2D Filtered Back-Projection Reconstruction	189	12.8	Ultra-short Echo and ZTE MRI	202
12.4	2D Fourier Imaging Reconstruction	191	12.9	MRI in Other Dimensions (4D, 1D, and One Voxel)	203
12.5	Sampling Patterns Between the Cartesian and Radial Grids	194	12.10	Resolution in MRI	206

Chapter 13 Imaging Instrumentation and Experiments				209	
13.1	Shaped Pulses	209	13.4	Imaging Parameters in MRI	217
13.2	The Gradient Units	211	13.5	Image Processing Software	219
13.3	Instrumentation Configurations for MRI	215	13.6	Best Test Samples for MRI	219

Part V Quantitative and Creative MRI 223

Chapter 14 Image Contrast in MRI				225	
14.1	Non-trivial Relationship Between Spin Density and Image Intensity	225	14.3	How to Obtain Useful Information from Image Contrast?	229
14.2	Image Contrast in MRI	227	14.4	Magnetization-prepared Sequences in Quantitative MRI	231

Chapter 15 Quantitative MRI		235
15.1	Quantitative Imaging of Velocity v and Molecular Diffusion D	235
15.2	Quantitative Imaging of Relaxation Times T_1 , T_2 , $T_{1\rho}$	247
15.3	Quantitative Imaging of Chemical Shift δ	254
15.4	Secondary Image Contrasts in MRI	259
15.5	Potential Issues and Practical Strategies in Quantitative MRI	264
Chapter 16 Advanced Topics in Quantitative MRI		275
16.1	Anisotropy and Tensor Properties in Quantitative MRI	277
16.2	Multi-Component Nature in Quantitative MRI	285
16.3	Quantitative Phase Information in the FID Data – SWI and QSM	288
16.4	Functional MRI (fMRI)	290
16.5	Optical Pumping and Hyperpolarization in MRI	290
Chapter 17 Reading the Binary Data		295
17.1	Formats of Data	295
17.2	Formats of Data Storage	296
17.3	Reading Unknown Binary Data	298
17.4	Examples of Specific Formats	301
<i>Appendices</i>		305
<i>Appendix 1 Background in Mathematics</i>		307
<i>A.1 Elementary Mathematics</i>		307
<i>A.2 Fourier Transform</i>		311
<i>Appendix 2 Background in Quantum Mechanics</i>		317
<i>A.2.1 Operators</i>		317
<i>A.2.2 Expansion of a Wave Function</i>		319
<i>A.2.3 Spin Operator I</i>		320
<i>A.2.4 Raising and Lowering Operators I_+ and I_-</i>		320
<i>A.2.5 Spin-1/2 Operator (in the Formalism of Pauli's Spin Matrices)</i>		321
<i>A.2.6 Density Matrix Operator ρ</i>		323
<i>Appendix 3 Background in Electronics</i>		325
<i>A.3.1 Ohm's Law for DC and AC Circuits</i>		325
<i>A.3.2 Electronics at Radio Frequency</i>		327
<i>Appendix 4 Sample Syllabi for a One-semester Course</i>		329
<i>Appendix 5 Homework Problems</i>		331
<i>Index</i>		337
