

Preface
Acknowledgements
Author biography
Acronyms and abbreviations

Part 1 Essential principles

1. History of echocardiography
2. Cardiac anatomy and physiology
3. Physics and instrumentation
4. Doppler physics
5. Myocardial mechanics
6. Service provision

Part 2 Cardiac imaging techniques

7. The standard transthoracic echo study
8. Transoesophageal echo
9. Stress echo
10. Contrast echo
11. Tissue Doppler imaging
12. Speckle tracking
13. 3D echo
14. Intravascular ultrasound and epicardial echo
15. Alternative cardiac imaging techniques

Part 3 Clinical cases

16. The left ventricle and its systolic function
17. Coronary artery disease and regional left ventricular function
18. Left ventricular diastolic function
19. The left atrium
20. The aortic valve
21. The mitral valve
22. The right ventricle
23. The right atrium
24. The tricuspid valve
25. The pulmonary valve
26. Pulmonary hypertension
27. Heart valve repair and replacement
28. Endocarditis
29. The cardiomyopathies
30. The pericardium
31. The aorta
32. Cardiac masses
33. Congenital heart disease
34. Common echo requests

Appendix - Echo resources
Index
