

Volume One: Principles

- 1 Plastic surgery and innovation in medicine
 - 2 History of reconstructive and aesthetic surgery
 - 3 Applying psychology to routine plastic surgery practice
 - 4 The role of ethics in plastic surgery and medico-legal issues in plastic surgery
 - 5 Business principles for plastic surgeons
 - 6 Value-based healthcare
 - 7 Digital photography in plastic surgery
 - 8 Pre- and intra-operative imaging for plastic surgery
 - 9 Patient safety in plastic surgery
 - 10 Anesthesia and pain management in plastic surgery
 - 11 Evidence-based medicine and health services research in plastic surgery
 - 12 Patient-reported outcomes in plastic surgery
 - 13 Health services research in plastic surgery
 - 14 Principles of cancer management
 - 15 Wound healing
 - 16 Scar prevention, treatment, and revision
 - 17 Skin grafting
 - 18 Tissue engineering
 - 19 Repair, grafting, and engineering of cartilage
 - 20 Repair and grafting of bone
 - 21 Repair and grafting of peripheral nerve
 - 22 Repair and grafting fat and adipose tissue
 - 23 Vascular territories
 - 24 Flap physiology, classification, and applications
 - 25 Principles and techniques of microvascular surgery
 - 26 Tissue expansion and implants
 - 27 Principles of radiation therapy
 - 28 Lymphedema: pathophysiology and basic science
 - 29 Benign and malignant nonmelanocytic tumors of the skin and soft tissue
 - 30 Melanoma
 - 31 Implants and biomaterials
 - 32 Transplantation in plastic surgery
 - 33 Technology innovation in plastic surgery: a practical guide for the surgeon innovator
 - 34 Robotics in plastic surgery
 - 35 Digital technology in plastic surgery
 - 36 Aesthetic improvement through noninvasive technologies
 - 37 Education and teaching in plastic surgery
 - 38 Global plastic surgery
 - 39 Gender-affirming surgery
