Preface

Acknowledgments

Chapter 1. A brief overview of human evolution and eating problems

Comfort and meaning

Chapter 2. Understanding anorexia nervosa

Claire

Diagnostic and Statistical Manual of Mental Disorders-III (DSM-III) in 1980

An explanation from evolutionary behavioral ecology

Chapter 3. Overview of the Adapted to Famine Treatment for anorexia nervosa

Understanding and treating passionate convictions, obsessive desires, and compulsive behaviors

A perfect biopsychosocial storm

The sameness of AN: Lynette and Rachel

The adapted-to-famine treatment challenges the Diagnostic and Statistical Manual of Mental Disorders definition of AN

The Adapted to Famine Treatment for AN

Three stages of recovery

Biological causation is good news for the therapeutic relationship

Making new meaning

Therapists, dietitians, physicians, and loved ones can help

Chapter 4. Treatment in the starving phase

General clinical considerations

Educational component of AN-AFT's CBT

Motivational interviewing for challenging the AN agenda

Acceptance and commitment therapy techniques with AN

Working with adolescents

Using motivation interviewing with adolescents

Other clinical situations

Working with younger children

Chapter 5. Nearly weight restored

The razor's edge

Chapter 6. Weight recovered phase

The relationship in Phase 3

Were people who developed AN really mentally ill before the illness?

Perfectionism

Do or die: Butch Cassidy and the Sundance Kid

Interventions for symptoms in Phase 3

What if nothing you do would change your weight?

Mourning the loss of anorexia's sense of being special and of having an important mission

Chapter 7. Problems with the DSM

The interpreter explains it all

Patient's search for an explanation

Other evidence overlooked by DSM authors

Inference to the best explanation

Chapter 8. Psychotherapy outcome research

History

Eating disorders only make sense in the light of evolution

Chapter 9. The evolutionary sense of other eating disorders and fatness

ARFID

Bulimia and Binge Eating Disorder

Fatness

Bred to store fat: thrifty genes and healthy brides

Selection by genocide

Epigenetic regulation

Chapter 10. Conclusion

Changing the story has social consequences

A deadly double bind

Imagine a world where no one dieted

Appendix 1. Melissa Espinoza's stories
