## **Section 1 The basics 1**

### **1 Cardiac anatomy, physiology and development 3**

Why do we need a cardiovascular system? 3  
Anatomy of the heart and great vessels 3  
Development of the heart and great vessels 11

### **2 The cardiac cycle, control of cardiac output and haemodynamic regulation 15**

Cardiac electrophysiology 15  
The cardiac cycle 19  
Control of cardiac output 22  
Haemodynamics and vascular function 24  
Integrated control of the cardiovascular system and cardiovascular reflexes 27

### **3 ECG interpretation 35**

The electrocardiogram 35  
Presenting an ECG 39

### **4 Other cardiac investigations 41**

Common cardiac blood tests 41  
Exercise ECG 41  
Echocardiography 43  
Computed tomography coronary angiography 45  
Cardiac magnetic resonance 46  
Cardiac catheterization 46  
Radionuclide imaging 47

## **Section 2 Presenting complaints 49**

### **5 History and examination of the cardiovascular system 51**

History 51  
Clinical examination 51  
Cardiovascular examination summary 57

### **6 Chest pain 59**

Differential diagnosis 59  
History 59  
Examination 61  
Investigations 62  
New onset central chest pain at rest in an ill patient 64

### **7 Breathlessness and peripheral oedema 67**

Differential diagnosis 67  
History 67  
Examination 69  
Investigation 70  
Recent onset dyspnoea at rest in an ill patient 72

### **8 Palpitations 75**

Differential diagnosis 75  
History 75

Examination 76  
Investigations 78  
Palpitations in the unwell patient 80

### **9 Syncope 83**

Differential diagnosis of syncope 83  
History 83  
Examination 85  
Investigations 86  
Reflex (neurally mediated) syncope 87  
Syncope of recent onset in the unwell patient 87  
Driving regulations in syncopal patients 89

### **10 Heart murmurs 91**

Differential diagnosis 91  
History 91  
Examination 93  
Investigations 95  
Presenting your findings 98

## **Section 3 Clinical conditions 101**

### **11 Atherosclerosis and its risk factors 103**

Pathogenesis of atherosclerosis 103  
Classification of ischaemic heart disease 104  
Risk factors for atherosclerosis 107  
Risk prediction and primary prevention of ischaemic heart disease 107  
Lipids and the cardiovascular system 108  
Hypertension 111

### **12 Stable angina and acute coronary syndromes 123**

Stable angina 123  
Acute coronary syndromes 129

### **13 Heart failure 139**

Pathophysiology of heart failure 139  
Clinical features 141  
Investigations 143  
Management 145

### **14 Arrhythmias 151**

Bradyarrhythmias 151  
Supraventricular tachyarrhythmias 156  
Ventricular arrhythmias 164  
Antiarrhythmic drugs 169  
Algorithms for management of arrhythmias 170  
Cardiac arrest and resuscitation 171

### **15 Valvular disease 179**

Rheumatic heart disease 179  
Aortic stenosis 180  
Aortic regurgitation 183  
Mitral stenosis 185  
Mitral regurgitation 188  
Tricuspid disease 190  
Pulmonary disease 192  
Assessing the severity of a valve lesion 192  
Prosthetic heart valves 192  
Infective endocarditis 194

**16 Diseases of the myocardium and pericardium 203**

Diseases of the myocardium 203

Diseases of the pericardium 208

**17 Congenital heart disease 213**

Causes of congenital heart disease 213

Complications of congenital heart disease 214

Pregnancy risk assessment 215

Congenital defects with left-to-right shunts 215

Congenital defects with right-to-left shunts 219

Obstructive congenital defects 221

Other lesions in congenital heart disease 222

**18 Vascular disease 225**

Arterial disease 225

Venous disease 237
