

1. Book introduction: Major trends in vitamin D research;
 2. Evolution of human skin pigmentation and vitamin D;
 3. Photobiology of vitamin D;
 4. The activating enzymes of vitamin D metabolism (25- and 1 α -hydroxylases);
 5. CYP24A1: structure, function, and physiological role;
 6. Alternative pathways for vitamin D metabolism;
 7. Vitamin D-binding protein;
 8. Regulation of renal vitamin D metabolism;
 9. Regulation of extra-renal synthesis of 1,25(OH) $_2$ D;
 10. Structural basis for ligand activity in vitamin D receptor;
 11. Genome-wide perspectives on vitamin D receptor actions;
 12. Vitamin D, chromatin, and epigenetics;
 13. The diverse genomic mechanisms of action of the vitamin D receptor;
 14. Vitamin D and microRNAs;
 15. Pathway based-analysis of transcriptomic data from vitamin D studies
 16. Vitamin D and the kidney;
 17. Vitamin D and the calcium-sensing receptor;
 18. Regulation of intestinal calcium and phosphate absorption by vitamin D;
 19. Vitamin D and FGF23;
 20. Osteoclastogenesis and vitamin D;
 21. Vitamin D activity in osteoblasts and osteocytes;
 22. Cartilage;
 23. Vitamin D and bone: an integrated approach;
 24. Vitamin D in dentoalveolar and oral health;
 25. Role of vitamin D in skin and hair biology;
 26. Vitamin D and the cardiovascular system;
 27. Vitamin D, brain development and function;
 28. Vitamin D, VDR, and adipose tissue: focus on cellular mechanisms;
 29. Vitamin D and skeletal muscle;
 30. Understanding vitamin D from mouse knockout models;
 31. Pharmacology and pharmacokinetics of vitamin D;
 32. Vitamin D as a modifier of genomic function and phenotypic expression during pregnancy;
 33. The role of vitamin D physiology in regulating calcium and bone metabolism in mother and child: pregnancy, lactation, postweaning, fetus, and neonate;
 34. Vitamin D and the placenta;
 35. Consequences of perinatal vitamin D deficiency on later bone health;
 36. Adolescence and acquisition of peak bone mass;
 37. The role of vitamin D in orthopedic surgery;
 38. Vitamin D and muscle performance in athletes and older adults;
 39. Role in reproductive biology and dysfunction in women;
 40. Vitamin D, reproductive endocrinology, and male reproductive organ function in health and disease;
 41. Vitamin D and the renin-angiotensin system;
 42. Vitamin D: presence and function in the eye;
 43. Adult vitamin D deficiency and adverse brain outcomes
 44. Vitamin D and the lung;
 45. Design and synthesis of vitamin D analogs;
 46. Structure function relationships of VDR ligands;
 47. Modulating vitamin D receptor coregulator binding with small molecules;
 48. Mass spectrometry assays of vitamin D metabolites;
 49. Measurement and quality assessment of total and free 25-hydroxyvitamin D;
 50. Vitamin D tissue distribution by mass spectrometry imaging;
