Foreword to the first edition by Professor Sir David Weatherall	xii
Preface to the seventh edition	xiv
Preface to the first edition	xvii
Acknowledgements	xix
Chapter 1 Why read papers at all?	1
Does 'evidence-based medicine' simply mean 'reading papers in medical journals'?	1
Why do people sometimes groan when you mention evidence-based healthcare?	4
Before you start: formulate the problem	11
Exercises based on this chapter	13
References	14
Chapter 2 Searching the literature	15
The information jungle	15
What are you looking for?	16
Levels upon levels of evidence	17
Synthesised sources: systems, summaries and syntheses	18
Pre-appraised sources: synopses of systematic reviews and primary studies	21
Specialised resources	22
Primary studies: tackling the jungle	23
One-stop shopping: federated search engines	25
Using artificial intelligence to search the literature	25
Asking for help and asking around	26
Online tutorials for effective searching	26
Exercises based on this chapter	27
References	28
Chapter 3 Getting your bearings: what is this paper about?	30
The science of 'trashing' papers	30
Three preliminary questions to get your bearings	32

viii **Contents**

What are randomised controlled trials and why do they matter?	34
What are cohort studies?	38
What are case-control studies?	40
What are cross-sectional surveys?	40
What are case reports?	41
The traditional hierarchy of evidence	42
Exercises based on this chapter	43
References	43
Chapter 4 Assessing methodological quality	45
Was the study original?	45
Who is the study about?	46
Was the design of the study sensible?	47
Was bias avoided or minimised?	49
Was assessment 'blind'?	54
Were preliminary statistical questions addressed?	55
A note on ethical considerations	58
Summing up	59
Exercises based on this chapter	60
References	60
Chapter 5 Statistics for the non-statistician	63
How can non-statisticians evaluate statistical tests?	63
Have the authors set the scene correctly?	65
Paired data, tails and outliers	71
Correlation, regression and causation	72
Probability and confidence	74
The bottom line (quantifying the chance of benefit and harm)	77
Summary	79
Exercises based on this chapter	79
References	80
Chapter 6 Papers that report clinical trials of simple interventions	82
What is a clinical trial?	82
Drug trials: 'evidence' and marketing	83
Making decisions about therapy	86
Surrogate endpoints	87
What information to expect in a paper describing a randomised controlled trial: the CONSORT statement	91
Getting worthwhile evidence from pharmaceutical representatives	91
A note on vaccine trials	94
Exercises based on this chapter	95
References	95

Chapter 7	Papers that report trials of complex interventions	99
	Complex interventions	99
	Ten questions to ask about a paper describing a complex intervention	101
	Exercises based on this chapter	106
	References	107
Chapter 8	Papers that report diagnostic or screening tests	109
	Ten suspects in the dock	109
	Validating diagnostic tests against a gold standard	110
	Ten questions to ask about a paper that claims to validate a diagnostic or screening test	115
	Likelihood ratios	119
	Clinical prediction models	122
	Exercises based on this chapter	124
	References	125
Chapter 9	Papers that summarise other papers (systematic reviews and meta-analyses)	128
	When is a review systematic?	128
	Evaluating systematic reviews: five questions to ask	131
	Meta-analysis for the non-statistician	137
	Explaining heterogeneity	142
	New approaches to systematic review	145
	Exercises based on this chapter	146
	References	146
Chapter 10	Papers that advise you what to do (guidelines)	151
	The great guidelines debate	151
	Ten questions to ask about a clinical guideline	155
	Exercises based on this chapter	162
	References	162
Chapter 11	Papers that estimate what things cost (health economic evaluations)	164
	What is an economic evaluation?	164
	Health economics studies: two key approaches	166
	Costs and benefits of health interventions	167
	Measuring the value of health states	168
	Quality-adjusted life-years	169
	Low-value health: choosing wisely	171
	Twelve questions to ask about a health economic evaluation	172
	Conclusion	176
	Exercises based on this chapter	176
	References	177

x Contents

Chapter 12 Papers that go beyond numbers (qualitative research)	179
What is qualitative research?	179
Summarising and synthesising qualitative research	183
Nine questions to ask about a qualitative research paper	184
Conclusion	191
Exercises based on this chapter	192
References	192
Chapter 13 Papers that report questionnaire research	195
The rise and rise of questionnaire research	195
Ten questions to ask about a paper describing a questionnaire study	196
Exercises based on this chapter	205
References	206
Chapter 14 Papers that report quality improvement case studies	208
What are quality improvement studies and how should we research them?	208
Ten questions to ask about a paper describing a quality improvement initiative	210
Conclusion	217
Exercises based on this chapter	217
References	218
Chapter 15 Papers that describe genetic association studies	220
The three eras of human genetic studies (so far)	220
What is a genome-wide association study?	222
Clinical applications of genome-wide association studies	225
Direct-to-consumer genetic testing	226
Mendelian randomisation studies	227
Epigenetics: a space to watch	228
Ten questions to ask about a genetic association study	230
Exercises based on this chapter	234
References	234
Chapter 16 Applying evidence with patients	237
The patient perspective	237
Patient-reported outcome measures	239
Shared decision-making	240
Option grids	243
<i>n</i> -of-1 trials and other individualised approaches	244
Exercises based on this chapter	246
References	247

Chapter 17	Papers on artificial intelligence in healthcare	249
	Introduction	249
	Artificial intelligence	251
	Big data	253
	Machine learning	254
	Generative artificial intelligence: large language and multimodal models	254
	Ethical principles for the use of artificial intelligence for health	255
	Appraising artificial intelligence papers: a plethora of checklists	256
	Ten questions to ask about a paper that reports AI studies in healthcare	260
	Summary	264
	Exercises based on this chapter	264
	References	265
Chapter 18	EBM+: the importance of mechanistic evidence	268
	What is mechanistic evidence? An example	268
	The many types of mechanistic evidence and a preliminary hierarchy	269
	EBM+ means 'both and', not 'either or'	270
	Mechanistic evidence in the COVID-19 pandemic	272
	Exercises based on this chapter	275
	References	276
Chapter 19	Papers that report consensus exercises	278
	Why are consensus method papers important?	279
	How do experts choose and reach consensus on a specific topic?	279
	Consensus methods	281
	Ten questions to ask about a paper that reports a consensus statement	285
	Exercises based on this chapter	290
	References	291
Chapter 20	Criticisms of evidence-based healthcare	293
	What's wrong with evidence-based healthcare when it's done badly?	293
	What's wrong with evidence-based healthcare when it's done well?	296
	Why is 'evidence-based policymaking' so hard to achieve?	299
	Exercises based on this chapter	301
	References	301
Appendix 1	Checklists for finding, appraising and implementing evidence	304
Appendix 2	Assessing the effects of an intervention	316
