

Χαρακτηριστικά:

- Includes obstetric concepts with updated knowledge of physiologic and hematologic changes during pregnancy
- Offers best practice approaches and interventions regarding the fetus, including ectopic pregnancy and abortion
- Explores the use of and effects of drugs in the pregnant patient and potential medical and surgical approaches
- Written by authors with extensive clinical experience in critical obstetric care

Περιεχόμενα:

Part 1 Introduction

1. Physiological hematologic changes in pregnancy
2. Obstetrics hemorrhage and hypovolemic shock

Part 2 First Trimester Bleeding

3. Abortion

Part 3 Ante and intrapartum hemorrhage

4. Placental pathologies
5. Uterine rupture

Part 4 Post-Partum Hemorrhage

6. Uterine atony
7. Placenta accreta
8. Uterine inversion
9. Retained products of conception
10. Hepatic rupture

Part 5 Medical and surgical approach

11. Blood component therapy and massive transfusion
12. Hemostatic monitoring in obstetrics hemorrhage
13. Drugs used in massive bleeding

Part 6 Less invasive approach

14. Surgical interventions in obstetrics bleeding (compression suture and vascular ligature)
15. Intrauterine devices in obstetric hemorrhage

Part 7 Invasive approach

16. Damage control surgery in the obstetric patient

17. Consumption and dilutional coagulopathy in critically ill obstetric patient
18. Endocrine consequences of hemorrhagic shock: Sheehan's syndrome
