

Chapter 1: A brief history of the concept of dystonia and its evolution
Chapter 2: The defining clinical features of dystonia
Chapter 3: Classification and diagnostic strategy for dystonia
Chapter 4: Epidemiology of the dystonias
Chapter 5: Cervical dystonias
Chapter 6: Craniofacial dystonias
Chapter 7: Laryngeal dystonias
Chapter 8: Limb dystonias
Chapter 9: Isolated generalized dystonias
Chapter 10: Musician's and other task-specific dystonias
Chapter 11: Non-motor features of dystonia
Chapter 12: Dystonia and tremor
Chapter 13: Dystonia and parkinsonism
Chapter 14: Dystonia and ataxia
Chapter 15: Dystonia and myoclonus
Chapter 16: Dystonia and cerebral palsy
Chapter 17: Dystonia and the paroxysmal dyskinesias
Chapter 18: Dystonias combined with other features
Chapter 19: Dystonia induced by medications, illicit drugs, and environmental toxins
Chapter 20: Dystonia and trauma
Chapter 21: Dystonia and autoimmunity
Chapter 22: Dystonia genetics
Chapter 23: The neuroanatomical substrates of dystonia
Chapter 24: Dystonia physiology
Chapter 25: Psychogenic (functional) dystonia
Chapter 26: Pseudodystonia and differential diagnosis
Chapter 27: Workup of dystonia
Chapter 28: Symptom-targeted oral medications for dystonia
Chapter 29: Special interventions for certain types of dystonia
Chapter 30: Botulinum toxin treatment for dystonia
Chapter 31: Surgical treatments for dystonia
Chapter 32: Physiotherapy and complementary medicine for dystonia
