

Chapter 1 Genomic DNA isolation (Bacteria, plant, and animal cells/tissues)

Chapter 2 RNA isolation from mammalian cells/tissues, *Drosophila*, and *Caenorhabditis elegans* using monophasic lysis reagent

Chapter 3 Reverse-transcription polymerase chain reaction

Chapter 4 Quantitative reverse-transcription polymerase chain reaction: Real-time polymerase chain reaction

Chapter 5 Agarose gel electrophoresis

Chapter 6 3'RACE (random amplification of cDNA end)

Chapter 7 5'RACE (Random amplification of cDNA end)

Chapter 8 Plasmid isolation and purification (Alkaline lysis method)

Chapter 9 Preparation of competent cells (Bacterial cells) and transformation (Hanahan's method)

Chapter 10 Molecular gene cloning

Chapter 11 End-labeling of DNA (5'end labeling by T4 polynucleotide kinase)

Chapter 12 Sodium dodecyl sulphate-polyacrylamide gel electrophoresis and native polyacrylamide gel electrophoresis

Chapter 13 Western blotting

Chapter 14 Electrophoretic mobility shift assay for DNA-protein interaction

Chapter 15 Silver staining of proteins in acrylamide gel compatible with mass spectrometry: Acidic method (From Shevchenko et al., 1996)

Chapter 16 Animal cell culture (Adherent cells)

Chapter 17 Cell viability by MTT assay

Chapter 18 Lactate dehydrogenase assay

Chapter 19 Luciferase assay

Chapter 20 Co-immunoprecipitation

Chapter 21 Protein purification (His-tagged proteins by immobilized metal affinity chromatography)

Chapter 22 Subcellular fractionation by differential centrifugation (Separating nuclear, membrane, and cytosolic fraction)

Chapter 23 DNase 1 footprinting

Chapter 24 Chromatin immunoprecipitation-qPCR

Chapter 25 Flow cytometry for cell surface markers

Chapter 26 Basics of bioinformatics

Chapter 27 GST pull down assay

Chapter 28 Fluorescence *In Situ* hybridization from paraffin-embedded tissues

Chapter 29 An overview of yeast two-hybrid assay

Chapter 30 Enzyme-linked immunosorbent assay
