

## **1 Cellular biology**

Introduction

Eukaryotic organelles

The cell membrane

The cytoskeleton, cell motility and intracellular transport

Genetics

Epigenetics

## **2 Introduction to metabolism**

Introductory concepts

Key molecules in metabolism

## **3 The tricarboxylic acid (TCA) cycle**

Introduction

Key points

## **4 Oxidative phosphorylation**

Adenosine triphosphate generation

Substrate-level phosphorylation

Oxidative phosphorylation

## **5 Carbohydrate metabolism**

Carbohydrates: a definition

Carbohydrate digestion

Glucose entry into cells

Glycolysis

The insulin:glucagon ratio influence on glycolysis

Aerobic glycolysis versus anaerobic glycolysis

Hyperlactataemia

Hereditary red cell enzymopathies

The pyruvate → acetyl-CoA reaction

Regulation of PDH

Plasma glucose concentration regulation and prevention of hypoglycaemia

Timescale of glycogenolysis versus gluconeogenesis

Gluconeogenesis

Gluconeogenic substrates

Sequence of gluconeogenesis

Key differences between gluconeogenesis and glycolysis

Regulation of gluconeogenesis

Glycogen metabolism

Glycogen stores

Glycogen structure

Glycogen synthesis (glycogenesis)

Glycogen breakdown (glycogenolysis)

Regulation of glycogen metabolism  
Glycogen storage diseases  
The pentose phosphate pathway  
Reactions of the PPP  
Regulation of the PPP  
Glucose-6-phosphate dehydrogenase deficiency; the failure of the PPP  
Glutathione  
Fructose metabolism  
Genetic deficiencies of fructose metabolism  
Galactose metabolism  
Sorbitol metabolism  
Ethanol metabolism  
Impact of ethanol catabolism

## **6 Glucose homeostasis and diabetes mellitus**

Hormonal aspects of glucose regulation  
Metabolic syndrome  
Diabetes mellitus

## **7 Lipid metabolism and lipid transport**

Lipids: An introduction  
Fatty acid biosynthesis  
Lipid catabolism  
Cholesterol  
Lipid transport  
Exogenous lipids  
Endogenous lipids  
Dyslipidaemias  
Primary dyslipidaemia  
Familial hypercholesterolaemia  
Secondary dyslipidaemias  
Clinical management of dyslipidaemias  
Complications of dyslipidaemia  
Ketones and ketogenesis

## **8 Energy balance and obesity**

Body composition  
Energy balance  
Appetite regulation: hunger and satiety  
Clinical aspects of obesity  
Clinical consequences of obesity  
Obesity treatment strategies

## **9 Protein metabolism and malnutrition**

The structure of proteins  
Essential and non-essential amino acids  
Amino acid synthesis  
Biological derivatives of amino acids  
Nitrogen balance  
Amino acid catabolism  
Protein degradation  
Protein synthesis  
Dietary protein  
Parenteral and enteral nutrition  
Refeeding syndrome

### **10 One-carbon transfer, purines, pyrimidines and haem**

An overview of one-carbon metabolism  
Purines and pyrimidines: an overview  
Purine metabolism  
Pyrimidines  
Haem  
Porphyrias  
Lead poisoning  
Clinical Case – Jaundice

### **11 The thyroid gland**

Introduction  
Anatomy  
Histology  
Thyroid hormones  
Thyroid homeostasis: the hypothalamic–pituitary–thyroid axis  
Secretion and transport of thyroid hormones  
The function and physiology  
Disorders of thyroid function  
Investigations of thyroid function

### **12 Vitamins and their deficiencies**

Introduction  
Fat-soluble vitamins  
Vitamin A (fat soluble)  
Vitamin D (fat soluble)  
Vitamin E (fat soluble)  
Vitamin K (fat soluble)  
Water-soluble vitamins  
Thiamine: vitamin B1 (water soluble)  
Riboflavin: vitamin B2 (water soluble)  
Niacin: vitamin B3 (water soluble)

Pantothenic acid: vitamin B5 (water soluble)

Pyridoxine: vitamin B6 (water soluble)

Biotin: vitamin B7 (water soluble)

Folate: vitamin B9 (water soluble)

Cobalamin: vitamin B12

Vitamin C (water soluble)

### **13 Minerals and their deficiencies**

Introduction

Sodium, potassium and chloride

Calcium

Phosphorus

Magnesium

Iron

Zinc

Copper

Iodine

Other trace elements

Useful references

### **14 Clinical assessment of metabolism and nutritional disorders**

Introduction

History-taking

Common presenting complaints in nutritional and metabolic disorders

Examination

Dehydration

Relevant investigations

Newborn blood spot screening

### **Self-Assessment**

MLA High-yield association table

MLA Single best answer (SBA) questions

MLA SBA answers

OSCEs and short clinical cases
