

Contents

Foreword	viii
Preface	xi
Acknowledgments	xiv
1. The Invention of the CT Scanner and the Nobel Prize	1
Computed Tomography: A Definition	2
Three Major Stages of CT Imaging	4
Invention of the CT Scanner: The Nobel Prize for Pioneers Godfrey Hounsfield and Alan Cormack	8
Evolution of CT Scanners Leading to Present-Day Multi-Slice CT Imaging	10
References	14
2. Essential Physics of CT	17
Introduction	17
Radiation Attenuation: Essential Physics Related to CT Imaging	18
Attenuation and Hounsfield Units	22
The CT Gray-Scale Image	24
References	25
3. Data Acquisition: Principles and Technology	27
What Is Data Acquisition?	28
Types of Data Acquisition	28
Major Technical Data Acquisition Components	31
Detectors: Types, Principles, and Technology	35
References	41

4. Image Reconstruction Principles	43
Image Reconstruction: A Definition	45
Image Reconstruction Algorithms.	45
Artificial Intelligence and Its Subsets: Definitions	52
References	59
5. Multi-Slice CT: Principles and Instrumentation	62
What Is Multi-Slice CT (MSCT)?	63
MSCT System Components	65
Selectable Scan Parameters	71
Advantages of MSCT	73
References	74
6. Image Postprocessing	76
Scope of Image Processing	77
Windowing: Effect on Image Contrast and Image Brightness	79
Multiplanar Image Reformatting	82
Advanced Image Postprocessing Techniques	84
References	88
7. Image Quality	90
What Is Image Quality in Computed Tomography?	90
Spatial Resolution	91
Low-Contrast Resolution	93
Noise	95
Artifacts in a Nutshell.	98
References	99

8. CT Radiation Dose Considerations.....101

- CT Dose Trends 101
- The Basics of CT Dosimetry..... 102
- Factors Affecting the Dose in CT 105
- Dose Optimization 107
- References 109

**9. CT Quality Control for Technologists/
Radiographers114**

- Quality Assurance/Quality Control: Definitions 115
- Essential Steps in QC 116
- Tolerance Limits/Acceptance Criteria 117
- Equipment for QC Testing 118
- Routine QC Tests for the CT Technologist 121
- References 124

Index.....125
