

1. Introduction
Zahra Keshavarz-Motamed, Philippe Pibarot, Jose M. de La Torre Hernández
2. Hemodynamics: Fundamentals and roles in atrial fibrillation
Ahmad Bshennaty, Mohamad Alkhoul, Hoda Hatoum
3. Advances in blood flow quantification methods for diagnosis and monitoring of cardiovascular disease
Houriehsadat Jamalidinan, Kavithra Karalasingham, Julio Garcia
4. Advances in blood flow quantification methods for prediction of cardiovascular interventions
Tsung-Ying Tsai, Patrick Serruys, Eric K.W. Poon
5. Computational predictive modeling of valve performance and risks toward personalization of TAVR with lifetime management
Taylor Becker, Lakshmi Prasad Dasi
6. Advances in 4D flow MRI blood flow quantification methods for prediction of cardiovascular intervention
Alejandro Roldán-Alzate
7. Advancing clinical interventions through patient-specific in-vitro simulators: Challenges, techniques and future directions
Seyedvahid Khodaei, MohammadAli Daeian, Nima Maftoon, Zahra Keshavarz-Motamed
8. Enhancing patient management with TAVR and coronary disease through computational modeling
Seyedvahid Khodaei, MohammadAli Daeian, Zahra Keshavarz-Motamed
9. Impact of flow in assessment and prognosis of valvular heart diseases
Marie-Annick Clavel, Kathia Abdoun, Paolo Springhetti, Andreeanne Powers
10. Translational machine learning in cardiac disease: Advancing diagnosis, monitoring, and prediction
Yueqing Sun, Zahra Keshavarz-Motamed
11. Bridging the critical gap in cardiovascular biomechanics: From computational models to clinical applications
Seyedvahid Khodaei, Zahra Keshavarz-Motamed
