

Contents

Preface	ix	28	<i>Pasteurella</i> species, <i>Mannheimia</i>	
Acknowledgements	x		<i>haemolytica</i> and <i>Bibersteinia trehalosi</i>	349
Author biographies	xi	29	<i>Francisella tularensis</i>	358
About the Companion Website	xiv	30	<i>Histophilus somni</i> , <i>Glaesserella parasuis</i> , <i>Avibacterium paragallinarum</i> and <i>Gallibacterium anatis</i>	362
Section I Introduction to Microbiology, Infection, Immunity and Molecular Diagnostic Methods		31	<i>Taylorella</i> species	369
1 Microbiology, microbial pathogens and infectious disease	3	32	<i>Bordetella</i> species	372
2 Subdivisions, classification and morphological characterization of infectious agents	8	33	<i>Moraxella</i> species	378
3 Immunity and infection	14	34	<i>Brucella</i> species	382
4 Immune system disorders	78	35	<i>Campylobacter</i> and <i>Helicobacter</i> species	390
5 Vaccines and vaccination	96	36	<i>Lawsonia intracellularis</i>	397
6 Molecular diagnostic methods	114	37	<i>Spirochaetes</i>	400
		38	Pathogenic anaerobic non-spore-forming Gram-negative bacteria	415
Section II Introductory Bacteriology		39	Mycoplasmas	421
7 The structure of bacterial cells and bacterial taxonomy	143	40	<i>Chlamydia</i> species	432
8 Cultivation, preservation and inactivation of bacteria	151	41	<i>Rickettsiales</i> and <i>Coxiella burnetii</i>	442
9 Bacterial genetics, mechanisms of genetic variation and gene databases	158	42	Bacterial species of limited pathogenic significance in animals	453
10 Laboratory diagnosis of bacterial disease	177	Section IV Mycology		
11 Antibacterial agents	183	43	General features of fungi and an overview of their veterinary importance	461
12 Antibacterial resistance	192	44	Dermatophytes	471
13 Bacterial colonization, tissue invasion and clinical disease	202	45	<i>Aspergillus</i> species	478
Section III Pathogenic Bacteria		46	Yeasts and disease production	484
14 Overview of bacteria of veterinary importance	217	47	Dimorphic fungi	494
15 <i>Staphylococcus</i> species	225	48	Zygomycetes of veterinary importance	502
16 <i>Streptococcus</i> species and <i>Enterococcus</i> species	233	49	Fungus-like organisms of veterinary importance	508
17 <i>Actinomyces</i>	242	50	<i>Pneumocystis</i> species	513
18 <i>Corynebacterium</i> species	253	51	Opportunistic infections caused predominantly by phaeoid fungi	516
19 <i>Rhodococcus equi</i>	260	52	Mycotoxins and mycotoxicoses	520
20 <i>Listeria</i> species	264	53	Pathogenic algae and cyanobacteria	535
21 <i>Erysipelothrix rhusiopathiae</i>	269	54	Antifungal chemotherapy	541
22 <i>Bacillus</i> species	273	Section V Introductory Virology		
23 <i>Clostridium</i> and <i>Clostridioides</i> species	280	55	Nature, structure and taxonomy of viruses	561
24 <i>Mycobacterium</i> species	296	56	Replication of viruses	572
25 <i>Enterobacteriales</i>	309	57	Virus evolution	580
26 <i>Pseudomonas aeruginosa</i> and <i>Burkholderia</i> species	335	58	Propagation of viruses and virus–cell interactions	585
27 <i>Actinobacillus</i> species	342	59	Pathogenesis of viral diseases	590
		60	Laboratory diagnosis of viral infections	597
		61	Antiviral chemotherapy	603

Section VI Viruses and Prions

62	Overview of viruses of veterinary importance	623
63	<i>Orthoherpesviridae</i>	628
64	<i>Papillomaviridae</i>	645
65	<i>Adenoviridae</i>	651
66	<i>Poxviridae</i>	657
67	<i>Asfarviridae</i>	668
68	<i>Parvoviridae</i>	672
69	<i>Circoviridae</i> and <i>Anelloviridae</i>	681
70	<i>Retroviridae</i>	685
71	<i>Sedoreoviridae</i> and <i>Spinareoviridae</i>	701
72	<i>Birnaviridae</i>	710
73	<i>Orthomyxoviridae</i>	714
74	<i>Paramyxoviridae</i> and <i>Pneumoviridae</i>	723
75	<i>Rhabdoviridae</i>	736
76	<i>Bornaviridae</i>	743
77	<i>Peribunyaviridae</i> , <i>Nairoviridae</i> , <i>Phenuiviridae</i> and <i>Hantaviridae</i>	746
78	<i>Picornaviridae</i>	752
79	<i>Caliciviridae</i>	762
80	<i>Astroviridae</i>	768
81	<i>Coronaviridae</i>	771
82	<i>Arteriviridae</i>	784
83	<i>Flaviviridae</i>	790
84	<i>Togaviridae</i>	801
85	Prions: unconventional infectious agents	806

Section VII Microbial Agents and Disease

86	Lesions resulting from interaction of bacterial, fungal and viral pathogens with host organ systems	817
87	Interactions of microbial pathogens with the nervous system	819
88	Interactions of microbial pathogens with the male and female reproductive systems	828
89	The role of microbial pathogens in intestinal and liver disease	837
90	The role of microbial pathogens in respiratory disease	849
91	Interactions of microbial pathogens with the urinary system	859
92	Microbial diseases of the cardiovascular system	870
93	Interactions of microbial pathogens with the musculoskeletal system	880
94	The role of microbial pathogens in diseases of the integumentary system	895
95	Bacterial causes of bovine mastitis	908
96	Disinfection, biosecurity and other aspects of disease control	922
	Appendix: Relevant websites	966
	Index	969
