

Χαρακτηριστικά:

- Presents information in a **concise, consistent, tabular format**, with checklists of diagnostic and investigative pearls, **full-color clinical images**, and color-coded boxes for quick reference
- Includes **new chapters** on Cryoglobulinemia, Frontal fibrosing alopecia, Lipoedema, Lipoid proteinosis, mpox, and Stasis dermatitis/ID reaction
- Provides first- to third-line therapies for 261 of the most common skin disorders, including **specific drug doses**
- Discusses **recently introduced drugs**, including several **new biologics** for psoriasis, hidradenitis, and atopic dermatitis; other biologics in development for connective tissue disorders; new JAK inhibitors for atopic dermatitis, vitiligo, alopecia areata, and numerous other disorders; spesolimab for generalized pustular psoriasis; **new lasers** for various conditions, including pigmentary disorders; and more
- Includes **off-label uses**, new treatments like monoclonal antibodies, and new indications for existing treatments
- Offers the combined knowledge and expertise of the **world's leading authorities** in dermatology, and is an ideal tool to assist with prior authorizations
- **An eBook version is included with purchase.** The eBook allows you to access all of the text, figures, and references, with the ability to search, make notes and highlights, and have content read aloud. Additional digital ancillary content may publish after the publication date
