1 General Microbiology 1
Howard F. Jenkinson and Daniel P. Miller

Introduction 1

Biological Classification Scheme 2

Bacterial Classification 3

Bacterial Architecture 4
Membranes 5
Cell Wall: Peptidoglycan 7
Lipopolysaccharides 9
Lipoteichoic Acids 11

Other Important Components Produced by Bacteria 12
Capsule 12
Fimbriae and Pili 13
Fibrillar Layers 13
Flagella 13
Vesicles 14
S-Layers 14
Endospores 14

Genetic Organization of Bacteria 15
The Bacterial Chromosome 15

Chromosome Replication in Bacteria 15
Maintaining DNA Integrity 17
Gene Transfer in Bacteria 18
Genetic Defense Mechanisms in Bacteria 19
Bacterial Gene Structure and Regulation 19

Bacterial Growth and Nutrition 20
Growth 20
Nutrient Acquisition 22
Environmental Sensing 23
Quorum Sensing 24
Secondary Messaging Systems 24
Secretion 25

Fundamental Concepts of Oral Microbial Ecology 29
Microbial Biofilms 29
Microbial Cooperativity 30
Microbial Antagonism 30
Polymicrobial Communities 31
Ecology of the Oral Microbiota and Development of Oral Diseases 31

KEY POINTS 32

FURTHER READING 32

2 The Immune System and Its Functions 33
George Hajishengallis and Jonathan M. Korostoff

Introduction—What Is Immunity? 33

Innate and Adaptive Immunity 36

Humoral and Cell-Mediated Adaptive Immunity 43

Immune Recognition Mechanisms 47
Pattern-Recognition Receptors and Other Innate Immune Detection Mechanisms 48
Antigen Receptors and Adaptive Immune Recognition 53

Induction and Stages of the Immune Response 54

Tailored Immunity Requires Specialized Subsets of Immune Cells 59

Trained Immunity 61

KEY POINTS 64

FURTHER READING 64

3 The Oral Environment 65
Frank A. Scannapieco, Christian P. Ahearn, and Stefan Ruhl

Introduction 65

Oral Diseases 65

General Features of the Oral Environment 66
Teeth 66
The Oral Soft Tissues (Periodontium, Oral Mucosa, and Tongue) 69
Physical and Host Parameters Affecting Oral Microbial Colonization 70
Temperature 70
pH 70
Oxygen 71
Mechanical Abrasive Forces 71
Fluid Flow 72
Host Age, Gender, Ethnicity, and Genetic Background 72
The Oral Microbiota 73
Tooth Biofilm: Early Determinants of Biofilm Formation, Gingivitis, Periodontitis 73
Calculus 78
The Mucosal Microbiota 81
Concepts of Oral Biofilm Formation 84
Saliva and the Salivary Proteome 86
Saliva–Microbe Interactions 87
Saliva-Mediated Adhesion and Clearance of Bacteria from the Oral Cavity 89
Pellicle Adhesion Receptors 89
Saliva-Mediated Clearance 90
Antimicrobial Components in Saliva 93
Antiviral Components in Saliva 94
Saliva as a Source of Bacterial Nutrients 94
Gingival Crevicular Fluid 95
KEY POINTS 96
FURTHER READING 96

4 Methodologies for Evaluation of Oral Microbiome Composition and Functional Capacity 99
Patricia I. Diaz, Georgios N. Belibasakis, and Anilei Hoare
Introduction 99
Composition and Organization of the Oral Microbiome 100
Oral Microbiome Composition 100
Oral Microbiome Biogeography 101
Variation in Oral Microbiome Composition in Health and Disease 102
Methods to Survey the Oral Microbiome Composition and Functional Capacity 104

Microscopic Observation 104
Amplicon Sequencing 106
Metagenomics and Metatranscriptomics 110
Cultivation and Isolation 112
Genome Sequencing 115

Research and Clinical Applications of Oral Microbiome Evaluation 116

KEY POINTS 116

FURTHER READING 117

5 Oral Microbial Ecology 119

Richard J. Lamont, Howard F. Jenkinson, and Matthew Ramsey

Introduction 119

Acquisition of Oral Bacteria 120

Colonization by Oral Bacteria 121

Mechanisms of Adhesion 122
Surface Structures and Molecules Involved in Adhesion 123
Host Surface-Specific Constraints on Bacterial Adhesion 127
Adhesion and Metabolism 127

Bacterial Communication 131

Quorum Sensing 132
Competence 133
Contact-Dependent Interactions 134
Antagonism 134
Multicomponent Interactions 135

Episymbionts 136

Communication with Host Cells 137

Gene Regulation 138

KEY POINTS 141

FURTHER READING 141

6 Oral Microbial Physiology 143

Jorge Frias-Lopez and Paul G. Egland

Introduction 143

Energy Generation in Bacteria (Catabolism) 146

Aerobic Respiration 146
Anaerobic Respiration 148
Fermentation 149

Synthesis of Macromolecules in Bacteria (Anabolism) 151

LPS Biosynthesis 152

Fatty Acid and Phospholipid Biosynthesis 154
Biosynthesis of Virulence Factors and Its Regulation 156
Degradation of Virulence Factors and Its Regulation 158

Carbohydrate Metabolism and Acid Production 159
Sugar Uptake and Transport 159
Fermentation Pathways 161
Propionic Acid Fermentation 163
Acid Production and Acid Tolerance Mechanisms 163
Impact on Oral Health 168

Protein Metabolism and Amino Acid Fermentation 168
Protein Sources and Uptake 168
Proteases: Types and Mechanisms 169
Energy Generation Using Amino Acids 171
Volatile Sulfur Compounds (VSCs) in Oral Bacteria 175

Oxygen Metabolism, Oxidative Stress, and Adaptation 175
Sources of Oxygen for Oral Bacteria 175
Oxygen Levels and Redox Potentials in Dental Plaque 176
Oxygen Metabolism in Oral Bacteria, ROS, and Oxidative Damage 177
Repair Systems 180

Physiology of Oral Biofilms 181
Cooperative Interactions (Synergism) 181
Competitive Interactions (Antagonism) 185
Hydrogen Peroxide (H_2O_2) Production in Oral Bacteria 186

KEY POINTS 188

FURTHER READING 189

7 Genetics and Molecular Microbiology of Oral Bacteria 191

Justin Merritt

Introduction 191

Bacterial Horizontal Gene Transfer 192
Conjugation 192
Transduction 193
Natural Competence 195
Transposition 196

Molecular Microbiology 198
Bacterial Transformation Strategies 198
Targeted Mutagenesis 201
Reporter Genes 206
Regulated Gene Expression Systems 208
Forward Genetic Screens 211

KEY POINTS 212

FURTHER READING 213

8 Applied Molecular Approaches to Oral Microbial Ecology and Community Development 215

Jens Kreth

Introduction 215

Oral Microbial Ecology 216

Nutritional Requirements for Community Development 220

Biofilm Development—Shaping Microbe–Microbe and Microbe–Host Interactions 222

Bacteriophages—Little Guys with Big Impact? 227

Secretome and Membrane Vesicles 228

KEY POINTS 234

FURTHER READING 234

9 From Bacterial Genetics to Genomics 237

Jonathon L. Baker

Introduction 237

Fundamentals of Bacterial Genetics/Genomics and Pathogenicity 238

Development of Microbial-Omics 239

The Evolution of Methods to Study Bacterial Population Genomics and of the Concepts of "Species" and "Strain" in Microbiology 241

Application of Microbial -Omics to the Study of the Oral Microbiome Greatly Expands the Known Diversity 242

Example Applications of Pangenomics to the Study of the Oral Microbiome 244

Pathogenicity as a Spectrum 245

Evolution and Host Adaptation 246

Measuring Bacterial Load: The Blind Spot of Culture-Independent Analyses 248

Perspective 249

KEY POINTS 250

FURTHER READING 250

10 Structure and Function of Oral Mucosal Tissues 251

Kyulim Lee and Juhi Bagaitkar

Introduction 251

Teeth 252

Lips 253
Oral Vestibule 253
Gingiva 254
Palate 255
Tongue 256
Salivary Glands 257
Tonsils 258
Oral Mucosal Membrane 259
Response to Infection 267
KEY POINTS 268
FURTHER READING 268

11 Immunology of the Oral Cavity 271
Evlambia Hajishengallis and George Hajishengallis
Introduction 271
Secretory Immunity in the Oral Mucosa 273
Overview of Innate Host Defense Factors in Saliva 274
Cationic Antimicrobial Peptides 275
Proteins with Bacterial Agglutination Properties 276
Metal Ion Chelators 277
Protease Inhibitors 278
Enzymes Acting Against Bacterial Cell Walls 279
The Peroxidase System 279
Overview of Specific Host Defense Factors in Saliva 280
The Mucosal Immune System and Induction of S-IgA Antibodies in Saliva 282
Biological Activities of S-IgA Antibodies 283
Cell-Mediated Immunity in the Oral Mucosa 285
Immunity below the Gum Line 285
Host Defense at the Oral Mucosa: The Paradigm of Anti-fungal Immunity 290
Oral Antiviral Immunity 293
KEY POINTS 294
FURTHER READING 294

12 Aging, Epigenetics, and Oral Immunity 297
Sinem Esra Sahingur
Introduction 297
Characteristics of Senescence, Inflammaging, and Immunosenescence 298
Characteristics of Aging in the Oral Cavity 302

Teeth: Enamel, Dentin, and Pulp 302
Gingival Tissues 303
Periodontal Ligament and Cementum 304
Alveolar Bone 305
Salivary Glands 306

Characteristics of Periodontal Aging 306

Epigenetic Regulation in Periodontal Tissues 309
DNA Methylation 310
Histone Modifications 311
Non-coding RNAs: MicroRNAs (miRNA) 312
Non-coding RNAs: Long Non-coding RNAs (lncRNAs) 314

Clinical Implications of Oral Aging Mechanisms 314

Therapeutic Opportunities 317

KEY POINTS 318

FURTHER READING 319

13 Dental Caries: Etiology and Pathogenesis 321
Livia M.A. Tenuta, Hyun Koo, and Jaime A. Cury

Introduction 321

Tooth Structure and Development 322

Sites of Carious Lesions 324
Coronal Caries 324
Root Surface Caries 324

Diet and Dental Caries 324
Cariogenic Effect of Diet 324
Anticariogenic Properties of Food 327
Cariogenic Dental Biofilm Formation 328
Biochemical Composition of the Cariogenic Biofilm 330
Physicochemical Phenomena of Caries Development 331
Caries Control Using Fluoride 332

Experimental Caries Models 333
Laboratory Methods 333
Animal Models 334
In Situ (Intraoral) Models 335

KEY POINTS 336

FURTHER READING 337

14 Microbial Pathogenesis of Dental Caries 339
José A. Lemos, Hui Wu, and Hyun Koo

Introduction 339

The Cariogenic Biofilm: Mutans Streptococci and Dietary Sugars 342
Extracellular Polysaccharides and Biofilm Matrix 343

Genetic Regulation of GTFs 345
Sugar Transport and Acid Production 345
Acid Stress Tolerance and Survival 347
Other Stress Resistance and Virulence-Related Mechanisms 349

Microbial Interactions and Cariogenicity 351
Commensal-Pathogen Interactions 351
Acidogenic Interactions 352
Alkalinogenic Interactions 353
Bacterial-Fungal Interactions 354

Future Directions and Perspectives 354

KEY POINTS 356

FURTHER READING 356

15 Microbiology of Periodontal Diseases: General Concepts 359
Georgios N. Belibasakis and Nagihan Bostanci

Introduction and Definitions 359

Etiology and Pathogenesis 360

Current Classification of Periodontal Diseases 361

Epidemiology of Periodontal Diseases 361

Evolution of Etiological Hypotheses for Periodontal Diseases 361

Periodontal Pathobionts 364

Open-Ended Approaches for Research and Diagnostics of the Periodontal Microbiome 367

KEY POINTS 368

FURTHER READING 369

16 Virulence Factors of Periodontal Bacteria 371
Richard J. Lamont, Janina P. Lewis, and Jan Potempa

Introduction 371

Colonization 372
Localization in the Gingival Crevice 372
Attachment 373

Interface with Gingival Epithelial Cells 376

Community Development 379
Overall Model of Periodontal Disease Pathogenesis 379

Toxins 382
Repeats-in-Toxin (RTX) Family 382
Cytolethal Distending Toxin 382

Proteolytic Enzymes 383

Acquisition of Iron and Hemin 390
Resistance to Oxidative Stress 392
Intracellular Signaling 393
Surface-Associated Bioactive Components 394
Lipopolysaccharide (LPS), Lipoproteins, and Ceramides 394
Capsule and Surface Structures 395
Bioactive Cellular Components, Enzymes, and Metabolites 395
Outer Membrane Vesicles 396
Secretion of Virulence Factors 398
Resistance to Neutrophil Killing 400
KEY POINTS 402
FURTHER READING 402

17 Immunopathogenic Mechanisms in Periodontal Disease 403
George Hajishengallis
Introduction 403
Periodontitis as a Dysbiotic Inflammatory Disease 405
Immune Players in Periodontal Disease 410
Complement: Microbial Manipulation and Destructive Inflammation 411
Neutrophils: Bad News When Too Few or Too Many 415
Macrophages: Role in Inflammation and Its Resolution 418
Adaptive Immunity and Dendritic Cells: More Harm Than Good? 420
T Lymphocytes 421
B-Lineage Cells 424
Osteoimmunology: Linking Inflammation to Bone Loss 427
Inflammatory Memory and Periodontitis 428
Aging and Periodontitis 431
KEY POINTS 434
FURTHER READING 435

18 Oral Virology 437
Afsar Naqvi and Joel Schwartz
Introduction 437
What Is Oral Virology? 437
What Are Viruses? 437

Viral Transmission 438
Structure and Composition of Viruses 439
How Viruses Change: Viral Evolution 440
Contemporary Approaches to Oral Virology 441

The Virus Life Cycle 442
Viral Tropism in the Oral Cavity 445

Virus Taxonomy 448
Discovery of New Viruses 449

Oral Virology: The Viruses 450

Viruses That Can Cause Pathologies in the Oral Cavity 451
Human Herpesviruses 451
Human Papillomaviruses 455
Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2) 456
Picornaviruses 457
Human Immunodeficiency Virus (HIV) 458
Other Viruses 460

Antiviral Immune Responses 460
Viruses and the Innate Immune System 460
Viruses and the Adaptive Immune System 461
Viral Immune Evasion Strategies 463

Oral Viral Infections and Bacterial Disease 465
Herpesvirus 465
SARS-CoV-2 466
Bacteriophages and ERVs 468

Antiviral Vaccines and Therapies 469
Antiviral Immunoglobulin Preparations and Vaccines 469
Antiviral Compounds and Therapies 471
Bacteriophages as Promising Antibacterial Agents in the Era of Antimicrobial Resistance 473

KEY POINTS 475

FURTHER READING 476

19 Fungi and Fungal Infections of the Oral Cavity 477

Richard D. Cannon, Guangzhao Guan, and Norman A. Firth

Introduction 477

Biology 477
Morphology 478
Fungal Interactions 479
Replication 480

Pathogenesis 480
Acquisition 480
Virulence 481
Host Defenses Against Fungal Infection 483
Nonspecific Defense Mechanisms 483
Specific Defense Mechanisms 483
Antifungal Therapy 485
Growth and Identification of Fungi 485
Principles of Antifungal Chemotherapy 486
Clinical Conditions 488
Candidiasis 488
Aspergillosis 494
Cryptococcosis 495
Histoplasmosis 495
Blastomycosis 495
Paracoccidioidomycosis 496
Mucormycosis 496
KEY POINTS 497
FURTHER READING 498

20 Endodontic Infections and Therapeutic Approaches 499
Brenda P.F.A. Gomes, Isabela N. Rôças, and José F. Siqueira Jr.
Introduction 499
Overall Definitions and Concepts 500
Pathways of Root Canal Infection 501
Microbiome of Endodontic Infections 501
Microbiome Associated with Primary Apical Periodontitis 502
Microbiome Associated with Posttreatment Apical Periodontitis 503
Extraradicular Infection 504
Biofilms and the Endodontic Microenvironment 504
Root Canal Treatment: Challenges and Current Therapeutic Approaches 507
Variations in Bacterial Susceptibility to Disinfection Procedures 507
Chemomechanical Preparation (CMP) 508
Root Canal Irrigation 509
Intracanal Medication (ICM) 511
Root Canal Obturation and Coronal Restoration 512
Concluding Remarks and Perspectives 512
KEY POINTS 514
FURTHER READING 515

21 Systemic Disease and the Oral Microbiota 517

Nagihan Bostanci and Georgios N. Belibasakis

Introduction 517

Historical Perspective 518

Early Life Oral Microbiota and Development of the Mucosal Immune System 519

Microbial Dissemination Via the Oral Route 520

Systemic Diseases and Conditions Linked to the Oral Microbiota 521

Oral Microbiota and Respiratory Diseases 522

Oral Microbiota and Alzheimer's Disease 523

Oral Microbiota and Rheumatoid Arthritis 524

Oral Microbiota and Diabetes Mellitus 527

Oral Microbiota and Cardiovascular Disease 528

Oral Microbiota and the Oral–Gut–Brain Axis 529

Oral Microbiota and Female Reproductive Health 532

Oral Microbiota and Cancer 534

KEY POINTS 535

FURTHER READING 535

22 Systemic Antibiotics in Dental Practice: Principles, Indications, and Stewardship 537

Zayed Naiera, Feres Magda, Saghi Mehraveh, and Wim Teughels

Introduction 537

Disinfectants and Antiseptics: Non-Antibiotic Antimicrobial Agents 539

Antibiotics: Types and Mechanisms of Action 540

Cell Wall-Active Agents 540

Anti-Ribosomal Agents 547

Antifolate Agents 551

Topoisomerase Inhibitors 552

Miscellaneous Agents 553

Measuring the Effects of Antibiotics 555

Antibiotic Combinations 556

Spectrum of Antibiotic Activity and Ecological Balance of the Human Microbiota 558

Bacterial Resistance to Antibiotics 559

Resistance: Health Effects, Consequences, and Economic Costs 559

Overview of Resistance Mechanisms 561

Types of Bacterial Resistance to Antibiotics 566
Antibiotic Resistance in Oral Bacteria 567
Risk of Cross-Resistance Between Nonantibiotic Antimicrobial Agents and Antibiotics 568
Biofilm-Associated Drug Tolerance 570
Antibiotic Adjuvants 572

The Use of Antibiotics in Dentistry 575
What Can Dentists Do to Minimize the Risks of Antibiotic Resistance? 576

Odontogenic Infections 577
Empirical Antibiotic Selection for Odontogenic Infection: Current Perspectives 579
Commonly Prescribed Systemic Antibiotics for Odontogenic Infections 580

Endodontic (Periapical) Infections 583
Use of Systemic Antibiotics in Endodontic Infection 583

Periodontal Infections 585
Use of Systemic Antibiotics in Periodontal Therapy 586

Prevention of Bacteremia and Endocarditis (Antibiotic Prophylaxis) 589

Future Perspectives in Antimicrobial Stewardship in Dentistry 591

KEY POINTS 593

FURTHER READING 593

23 Therapeutic Approaches for Biofilm Control and Host Modulation in Oral Diseases 595
Yuan Liu, George Hajishengallis, Hyun Koo, and Zhi Ren

Introduction 595

Anti-Biofilm Approaches to Control Oral Diseases 596
Prevention of Bacterial Adhesion and Biofilm Initiation 596
Oral Surface Modification 597
Physical and Topographical Modifications 598
Chemical and Physicochemical Modifications 599
Control of Bacterial Force-Sensing 600
Targeting Adhesion Mechanisms 601
Inhibition of EPS Production 601
Targeting Community Interactions 602

Disruption of Biofilms 604
Mechanical Disruption 604
Chemical Disruption 605
Nanotechnology 608

Host Response Modulation in Oral Diseases 615

Immunization Against Dental Caries 615
Rationale and Scope for Host Modulation Therapies in Periodontal Disease 617
Immunization Against Periodontal Disease 618
Strategies for Inhibition and Resolution of Periodontal Inflammation 619
Approaches for Direct Inhibition of Periodontal Tissue Destruction 623
Potential Safety Issues 624
Concluding Remarks and Perspectives 625
KEY POINTS 626
FURTHER READING 626

24 Infection Prevention and Control in Dentistry 627
J. Christopher Fenno and Brandonn K. Perry
Introduction 627
Introduction to Risk Control 630
Quality Assurance Is the Promise of Performance 630
Cross-Infection Control Is Essentially a Set of Management Strategies for Risk Control 630
What Is Risk Management? 631
Cross-Infection Risks in Dentistry 632
Routes of Spread of Infection 632
Management of Recently Identified Infection Control Risks 635
Practical Application of Infection Control Measures in General Dentistry 641
Definitions of Terms 641
Problems Posed for Prevention of Cross-Infection in General Dental Practice 641
Standard Precautions 643
Infection Control Checklist 647
Sterilization of Instruments 647
KEY POINTS 652
FURTHER READING 653

Index 655
